## MINIMUM ORDERS

Orders amounting to less than $\mathbf{¥ 1 0 , 0 0 0}$ net per order will be charged as $¥ 10,000$ net per order plus freight and other charges.

## WEIGHTS AND DIMENSIONS

Weights and dimensions appearing in this catalog are the best information available at the time of going to press. FUJI ELECTRIC FA has a policy of continuous product improvement, and design changes may make this information out of date.
Please confirm such details before planning actual construction.

## INFORMATION IN THIS CATALOG IS SUBJECT TO CHANGE WITHOUT NOTICE.

WM8N type wide-angle indicating switchboard instruments

## - Description

WN8N-type meters are used in many industrial applications such as switchboards, supervisory panels, metal-clad switchgear and control desks. These are compact in size and easy to read. Scales have equal intervals and indicate through a $240^{\circ}$ angle, a feature which distinguishes them from the conventional meters.
Meters can be read at a distance, since instrument surfaces are protected by a non-reflecting glass and are not affected by reflections from room lighting .
Ammeters are provided with an overload scale in red. These instruments comply with the requirements of JIS C1102 and are highly reliable. They can withstand a great deal of abuse in use because of their rugged construction.

## - Features

- High accuracy External magnetic fields cannot influence readings.
- Accuracy class: 1.5
- Easy-to-read long-scales and pointerindications can easily be read from a distance.
- $110 \times 110 \mathrm{~mm}$ and $80 \times 80 \mathrm{~mm}$ front frame sizes.
- Auxiliary equipment such as shunt, impedance box and series resistor is available.

## Ordering information

Specify the following:

1. Type number (Ordering code)
2. Measuring range
3. Supply voltage and frequency
4. Connection (When connecting to VT or CT, specify VT ratio or CT ratio)

For further information, see page 09/04.

## Shunt WM9N-1, -2

## Features

- Shunt for DC ammeter. JIS (JIS C-1721) class 0.5 and class 1.0 models are available. Select the model based on the required accuracy.
- Keep in mind that a shunt is a source of heat generation, and select a shunt with a current value with sufficient margin. (As a general rule, select a shunt with approximately 1.5 times the continuous operating current.)
- The standard terminal voltage for the shunt is 60 mV , but models with voltage of 100 mV can also be produced.

## WE1MA power line multi-meters

## Description

Perform measurement and monitoring for 213 points in 52 categories for Single-phase/2-wire, Single-phase/3-wire, 3 -phase/3-wire, and 3-phase/4-wire

## Features

- With one unit, you can measure or monitor the voltage, current, demand current, power, demand power, reactive power, apparent power, power factor, frequency, leakage current, harmonic effective value ( $\mathrm{A}, \mathrm{V}$ ), distortion, harmonic content rate, power level, and reactive power level.
- The unit supports 3-phase/3-wire, Single-phase/3-wire, and Single-phase/2-wire and switching to 3 -phase/4-wire is supported with 2VT, 3CT/3VT, or 3CT settings.
- The measurements are displayed using a four-element display: one display on the main monitor and three displays on the sub-monitors along with a bar graph.
- Measure and output alarms for leakage current.

- Outputs include four analog circuits, a pulse output, an alarm output, a CPU error output, and a communications output (according to specification).
- Communications output supports F-MPC Net, CC-Link, AnyWire, Modbus RTU, and RS-485 (according to user specification).
- All models comply with the RoHS Directive (i.e., lead-free).

## Type number nomenclature

## Basic type

WE1MA -

Hardware model
B : Back light Green
E: Back light White
Input circuits
F: Single-phase/2-wire, Single-phase/3-wire,
and 3-phase/3-wire common
1 : Single-phase, 2-wire
2 : Single-phase, 3-wire
3 : 3-phase, 3-wire
G: Single-phase/2-wire, Single-phase/3-wire, 3-phase/3-wire + leakage current common
5 : Single-phase, 2-wire + leakage current
6 : Single-phase, 3-wire + leakage current
7 : 3-phase, 3-wire + leakage current
4 : 3-phase, 4-wire

## Input range

F: 150V, 300V common, 5A
$1: 150 \mathrm{~V}, 5 \mathrm{~A}$
3 : 300V, 5A
5:5A
9:150V
A: 300V
G: 150V, 300 V common, 1 A
$2: 150 \mathrm{~V}, 1 \mathrm{~A}$
$4: 300 \mathrm{~V}, 1 \mathrm{~A}$
6:1A
7 : 5A (3-phase, 3-wire, 3CT)
8:1A (3-phase, 3-wire, 3CT)
P: 150V, 5A (3-phase, 3-wire, 2VT, 3CT)
Q : 150V, 1A (3-phase, 3-wire, 2VT, 3CT)
R : 300V, 5A (3-phase, 3-wire, 2VT, 3CT)
S:300V, 1A (3-phase, 3-wire, 2VT, 3CT)
3-phase, 4-wire
F : $150 / \sqrt{3} \mathrm{~V}$ or $300 / \sqrt{ } 3 \mathrm{~V}, 5 \mathrm{~A}$
$1: 150 / \sqrt{ } 3 V, 5 A$
$3: 300 / \sqrt{ } 3 V, 5 A$
5:5A
$9: 150 / \sqrt{ } 3 \mathrm{~V}$
A : 300/ $\sqrt{3} \mathrm{~V}$
G: $150 / \sqrt{ } 3 \mathrm{~V}$ or $300 / \sqrt{ } 3 \mathrm{~V}, 1 \mathrm{~A}$
$2: 150 / \sqrt{3} \mathrm{~V}, 1 \mathrm{~A}$
$4: 300 / \sqrt{3 V}, 1 \mathrm{~A}$
6:1A
B: 440/ $\sqrt{3} \mathrm{~V}, 5 \mathrm{~A}$
C: 440/ $\sqrt{3} \mathrm{~V}, 1 \mathrm{~A}$
Z : Depends on user specification.

## Auxiliary power supply

1 : 85 to 264 V AC or 80 to 143 V DC
$2: 20$ to 56V DC

## LCD viewing direction

1 : Upper mounting (viewed from below)
2 : Lower mounting (viewed from above)

## - Specifications and performance

- Standard specifications and performance

| Item | Specification |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  | Power |  | $\pm 1.0 \%$ | $\pm 0.5 \%$ |  |  | Current | $\pm 2.5 \%$ | $\pm 2.5 \%$ |
|  | Reactive power |  | $\pm 1.0 \%$ | $\pm 0.5 \%$ | 5th harmonic conversion effective value |  | Voltage, current | $\pm 1.5 \%$ | $\pm 1.5 \%$ |
|  | Apparent power *1 |  | $\pm 1.0 \%$ | $\pm 0.5 \%$ | 5th harmonic conversion effective value |  | Voltage | $\pm 1.0 \%$ | $\pm 2.5 \%$ |
|  | Power factor |  | $\pm 2.0 \%$ | $\pm 2.0 \%$ |  |  | Current | $\pm 2.5 \%$ | $\pm 2.5 \%$ |
|  | Frequency |  | $\pm 0.5 \%$ | $\pm 0.5 \%$ | Power level |  | Power factor of 1 | $\pm 2.0 \%$ | $\pm 2.0 \%$ |
|  | Leakage current lo method, Igr method |  | $\pm 2.5 \%{ }^{* 2}$ | $\pm 2.5 \%{ }^{* 2}$ |  |  | Power factor of 0.5 | $\pm 2.5 \%$ | $\pm 2.5 \%$ |
|  |  |  | Reactive power level |  | Power factor of 1 | $\pm 2.5 \%$ | $\pm 2.5 \%$ |
|  | Fundamental wave effective value | Voltage |  | $\pm 1.5 \%$ | $\pm 1.5 \%$ | Reactive power level |  | Power factor of 0.87 | $\pm 2.5 \%$ | $\pm 2.5 \%$ |
|  |  | Current | $\pm 1.5 \%$ | $\pm 1.5 \%$ | ${ }^{* 1}$ For 3-phase/4-wire only <br> ${ }^{* 2}$ Error for ZCT is not included. It is $\pm 0.0025$ A (ZCT primary) at a leakage current detection sensitivity current of 0.1 A max. |  |  |  |  |
|  | Distortion | Voltage | $\pm 1.0 \%$ | $\pm 2.5 \%$ |  |  |  |  |  |
|  |  | Current | $\pm 2.5 \%$ | $\pm 2.5 \%$ |  |  |  |  |  |
| Time limit setting | Demand current |  | $0 \mathrm{~s}, 5 \mathrm{~s}, 10 \mathrm{~s}, 20 \mathrm{~s}, 30 \mathrm{~s}, 40 \mathrm{~s}, 50 \mathrm{~s}, 1 \mathrm{~min}, 2 \mathrm{~min}, 3 \mathrm{~min}, 4 \mathrm{~min}, 5 \mathrm{~min}, 6 \mathrm{~min}, 7 \mathrm{~min}, 8 \mathrm{~min}, 9 \mathrm{~min}, 10 \mathrm{~min}$, $15 \mathrm{~min}, 20 \mathrm{~min}, 25 \mathrm{~min}, 30 \mathrm{~min}$ ( $95 \%$ time limit) |  |  |  |  |  |  |
|  | Demand power |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
|  | Harmonic measurement |  | Average time limit: $0 \mathrm{~min}, 1 \mathrm{~min}, 2 \mathrm{~min}, 5 \mathrm{~min}, 10 \mathrm{~min}, 15 \mathrm{~min}, 30 \mathrm{~min}$ (average measurement) |  |  |  |  |  |  |
| Bar graph error | $\pm 10 \%$ (\% of span) |  |  |  |  |  |  |  |  |
| Temperature effect | $23 \pm 10^{\circ} \mathrm{C}$ permissible differential |  |  |  |  |  |  |  |  |
| Conforming standards | JIS C 1102-1, -2, -3, -4, -5, -7(1997), JIS C 1111(1985), JIS C 1216(1995), JIS C 1263(1995), JIS C8374(1991), EIA standard RS-485 |  |  |  |  |  |  |  |  |
| Display refresh time | Approx. 1s (approx. 0.25 s for a bar graph) (For current leakage measurement, the refresh time is $2 s$ max. for the digital display and the bar graph and 10s for the digital display and the bar graph for harmonic measurement.) |  |  |  |  |  |  |  |  |
| Display elements and composition | Liquid crystal display |  | Main monitor |  |  | Character height: $11 \mathrm{~mm}, 5$ digits |  |  |  |
|  |  |  | Sub-monitor on left |  |  | Character height: $6 \mathrm{~mm}, 4$ digits |  |  |  |
|  |  |  | Sub-monitor in center and on right |  |  | Character height: 6mm, 5 digits |  |  |  |
|  |  |  | Bar graph |  |  | 20 dots |  |  |  |
| LCD viewing angle | Standard item |  | Upper mounting (viewed from below): top: $10^{\circ}$, bottom: $60^{\circ}$, left/right: $60^{\circ}$ |  |  |  |  |  |  |
|  | Special items |  | Lower mounting (viewed from above): top: $60^{\circ}$, bottom: $10^{\circ}$, left/right: $60^{\circ}$ |  |  |  |  |  |  |
| Backlight | LED backlight: Green or White, always ON, automatically turns OFF (after 5min with no operation), can be set to always OFF. |  |  |  |  |  |  |  |  |
| Input power consumption (VA) | Voltage circuit |  | 0.2VA max. |  |  |  |  |  |  |
|  | Current circuit |  | 0.1VA max. (5A, 1A) |  |  |  |  |  |  |
| Overload resistance | Voltage circuit |  | $2 \times$ rated voltage for $10 \mathrm{~s}, 1.2 \times$ rated current for continuous |  |  |  |  |  |  |
|  | Current circuit |  | $40 \times$ rated voltage for $1 \mathrm{~s}, 20 \times$ rated current for $4 \mathrm{~s}, 10 \times$ for 16 s , $1.2 \times$ rated current for continuous |  |  |  |  |  |  |
|  | Power supply power |  | $1.5 \times$ rated voltage for $10 \mathrm{~s}, 1.2 \times$ rated current for continuous, $1.5 \times$ rated voltage for 10 s at 110 V DC, $1.3 \times$ rated voltage for continuous at 110 V DC |  |  |  |  |  |  |
| Insulation resistance JIS C 1102-1 JIS C 1111 | Between electrical circuits and external cabinet (ground) |  |  |  |  | $50 \mathrm{M} \Omega$ min. with 500V DC tester |  |  |  |
|  | Between inputs, outputs, and auxiliary power supply |  |  |  |  |  |  |  |  |
|  | Between outputs (analog, communication, pulse, or alarm) |  |  |  |  |  |  |  |  |
|  | Between pulse outputs |  |  |  |  |  |  |  |  |
|  | Between alarm outputs |  |  |  |  |  |  |  |  |
|  | Analog outputs (negative common) are not isolated. |  |  |  |  |  |  |  |  |
| Withstand voltage JIS C 1102-1 JIS C 1111 | Between electrical circuits and external cabinet (ground) |  |  |  |  | 2000V AC (50/60Hz), 1 min . |  |  |  |
|  | Between inputs, outputs, and auxiliary power supply |  |  |  |  |  |  |  |  |
|  | Between outputs (analog, communication, pulse, or alarm) |  |  |  |  | 1500 V AC ( $50 / 60 \mathrm{~Hz}$ ), 1min. |  |  |  |
|  | Between pulse outputs |  |  |  |  |  |  |  |  |
|  | Between alarm outputs |  |  |  |  |  |  |  |  |
|  | Analog outputs (negative common) are not isolated. |  |  |  |  |  |  |  |  |
| Impulse withstand voltage JIS C 1111 | Between auxiliary power supply and cabinet (ground) (only with leakage current measurement) |  |  |  |  | $7 \mathrm{kV}, 1.2 / 50 \mu \mathrm{~s}$, positive and negative polarity, three times each |  |  |  |
|  | Between electrical circuits (except analog outputs and communications outputs) and cabinet (ground) |  |  |  |  | $6 \mathrm{kV}, 1.2 / 50 \mu \mathrm{~s}$, positive and negative polarity, three times each |  |  |  |
|  | Between analog outputs or communications outputs and cabinet (ground) |  |  |  |  | $5 \mathrm{kV}, 1.2 / 50 \mu \mathrm{~s}$, positive and negative polarity, three times each |  |  |  |

| Alarm output *4 | Alarm elements: Set any of the following: demand current, demand power, leakage current, 5th harmonic conversion content rate, nth harmonic content rate, distortion, voltage, alarm OFF. <br> Reset method: Automatic reset or manual reset (setting) <br> Contact delay time: 0 to 300 s (1s steps) <br> Output contacts: No-voltage NO (OR output of each phase) <br> Contact capacity: 250V AC 8A, 125V DC 0.3 A (resistive load), 250V AC 2A, 125V DC 0.1 A (inductive load) |  |  |  |  |  |  |
|  | Alarm elements | Item | Specification |  |  |  |  |
|  | Demand current | Function | Alarm display and alarm output when demand measurement value $\geq$ upper-limit set value |  |  |  |  |
|  |  | Setting accuracy | $\pm 1.0 \%$ (\% of full scale) |  |  |  |  |
|  |  | Setting range | $5 \%$ to $100 \%$ of max. scale value (1\% steps) |  |  |  |  |
|  | Demand power | Setting accuracy | $\pm 1.0 \%$ (\% of full scale) |  |  |  |  |
|  |  | Setting range | $5 \%$ to $100 \%$ of max. scale value (1\% steps) |  |  |  |  |
|  | Leakage current (only with leakage current management) | Sensitive current | Greater than $50 \%$ to $100 \%$ of rated sensitive current |  |  |  |  |
|  |  | Rated sensitive current | 0.03A/0.05A/0.1A/0.2A/0.4A/0.8A |  |  |  |  |
|  |  | Operation time | Time delay type (greater than 0.1 s to 2 s max.) |  |  |  |  |
|  |  | Test function | Detection of leakage current can be tested in test mode. |  |  |  |  |
|  | 5th harmonic conversion content rate | Function | Alarm display and alarm output (detection at maximum phase) when measurement value $\geq$ Upper-limit set value |  |  |  |  |
|  |  | Setting accuracy | Current: $\pm 2.5 \%$, Voltage: $\pm 1.0 \%$, as percentage of content rate |  |  |  |  |
|  |  | Setting range | Current ${ }^{\text {5th harmonic conversion content rate, nth harmonic }}$ |  | ontent rate ( $n=3,4,5,7$ | , or 15), distortio | 5\% to 100\% (1\% steps) |
|  | nth harmonic content rate |  | Voltage 5 5th harmonic conversion content rate, nth harmonic | 5 th harmonic conversion content rate, nth harmonic content rate ( $\mathrm{n}=3,4,5,7,9,11,13$, or 15 ), distortion $5 \%$ to $20 \%$ ( $0.1 \%$ steps) |  |  |  |
|  | Distortion | Detection characteristics | Average value mode: Detection when the average measurement value exceeds the setting given above Inverse time limit mode: Detection according to inverse time limit characteristics of instantaneous value (only for 5th harmonic conversion content rate) |  |  |  |  |
|  | Voltage | Function | Alarm display and alarm output (detection for maximum phase) when measurement value $\geq$ upper-limit set value Alarm display and alarm output (detection for minimum phase) when measurement value $\geq$ lower-limit set value |  |  |  |  |
|  |  | Setting accuracy | $\pm 1.0 \%$ (with full scale as $150 \%$ ) |  |  |  |  |
|  |  | Setting range | $30 \%$ to $150 \%$ (1\% steps) with full scale as 150\% |  |  |  |  |
| CPU error $\underset{* 4}{\text { output }}$ | Detection item (self-diagnosis item), OR output of detection items |  |  | Contact configuration | Capacity |  |  |
|  | (1) Watchdog timer (internal and external), (2) RAM check error, (3) A/D conversion error |  | OR output of detection items | NC contact | 250V AC 5A, 125V DC 0.2 A (resistive load), 250V AC 1.5A (inductive load) |  |  |

[^1]| Item | Specification |  |
| :---: | :---: | :---: |
| External operation input | No. of inputs | 2 circuits and functions (4 types) switchable using settings |
|  | External reset | The alarm output or maximum/minimum value can be reset by adding an external voltage signal. Alarm output reset and maximum/minimum value reset can be switched using settings. The input has the same ratings as the auxiliary power supply. |
|  | External display switching | The display can be switched by adding an external voltage signal. Measurement element switching and phase switching can be set. The input has the same ratings as the auxiliary power supply. |
|  | Minimum operation pulse width: 300 ms continuous application supported <br> (1) $100 / 110 \mathrm{~V}$ AC $0.4 \mathrm{VA}, 200 / 220 \mathrm{~V}$ AC $1.4 \mathrm{VA}, 100 / 110 \mathrm{~V}$ DC 0.4 W , Accepts both AC and DC. <br> Contact capacity: Approx. 3mA (100/110V AC/DC), approx. 6mA (200/220V AC) <br> (2) 24 V DC $0.3 \mathrm{~W}, 48 \mathrm{~V}$ DC 1.2 W , Contact capacity: Approx. 10 mA ( 24 V DC ), approx. 20 mA ( 48 V DC) |  |
| Vibration and shock resistance <br> JIS C 1102-1 <br> JIS C 0040, 0041 | Vibration: 0.15 mm single amplitude, 10 to 55 Hz , 1 octave per minute for 5 sweeps Shock: $490 \mathrm{~m} / \mathrm{s} 2$, three times each in $\mathrm{X}, \mathrm{Y}$, and Z directions |  |
| Operating temperature and humidity range | -10 to $55^{\circ} \mathrm{C}, 30 \%$ to $85 \%$ RH (no condensation) |  |
| Storage temperature range | -25 to $70^{\circ} \mathrm{C}$ |  |

## - Communications specifications

| Communications specification | Item | Specification |  |  |
| :---: | :---: | :---: | :---: | :---: |
| F-MPC Net | Standard | EIA RS-485 (1983) | Cable length | 1000m (total length) |
|  | Transmission method | 2-wire half-duplex | Address | 1 to 99 and not used (Loc) |
|  | Synchronization method | Asynchronous | No. of connectable units | Up to 31 units per system (including other devices) |
|  | Transmission speed | 4800/9600/19200bps |  |  |
| RS-485 communications output | RS-485, 2-wire half-duplex, asynchronous |  | Cable length | 1000m (total length) |
|  | Transmission speed | 1200/2400/4800/9600/19200bps | Address | 1 to 254 (31 units max. can be connected) |
| Modbus RTU communications output | Standard | EIA RS-485 | Cable length | 1000m (total length) |
|  | Synchronization method | Asynchronous | Address | 1 to 247 (31 units max. can be connected) |
|  | Transmission speed | 4800/9600/19200/38400bps |  |  |
| CC-Link Ver.1.10 | Transmission speed | 156k/625k/2.5M/5M/10Mbps | No. of allocated stations | 1 remote device station allocated |
|  | Maximum transmission distance | $1200 \mathrm{~m}(156 \mathrm{kbps}) / 900 \mathrm{~m}(625 \mathrm{kbps}) / 400 \mathrm{~m}(2.5 \mathrm{Mbps}) / 160 \mathrm{~m}(5 \mathrm{Mbps}) / 100 \mathrm{~m}(10 \mathrm{Mbps})$ |  |  |
|  | No. of connectable units | 42 (if only this unit is used) |  |  |
| AnyWire | Full quadruplex or full duplex total frame cyclic communications |  |  |  |
|  | Protocol | AnyWireBus protocol | Address settings | 0 to 63 (full quadruplex), 0 to 15 (full duplex) |

- Power (apparent power range)

480W to 1000MW range selection, maximum scale setting 40 to $115 \%$

- Reactive power

LEAD, LAG360var to 1000Mvar range selection, maximum scale setting 30\% to 115\%

- Power factor

LEAD0. 5 to 1 to LAG0. 5 or LEADO to 1 to LAG0 range selection

- Frequency

45 to 55 Hz or 55 to $65 \mathrm{~Hz}, 45$ to 65 Hz range selection

## ■ Part names and functions

## Bar graph display

Analog display of measurement value on
main monitor
(Settings can be made for bar graph display of the measurement value on the sub-monitor.)

Scale numbers
This is automatically set using the measurement range setting.
Upper limit or lower limit setting index
This displays the set value of the upper limit or lower limit.
Four elements can be measured and monitored at the same time.

- Main monitor
- Sub-monitor on right
- Sub-monitor in center
- Sub-monitor on left $\qquad$

SET
This switch is used to toggle between a normal display (five integer digits) and an expanded display (two integer digits and three digits below the decimal point) for the total value of each power level.
After the display is switched, it will return to a normal display if there is no operation for 10 minutes. The switch can also be used to switch into setting mode. When the switch is pressed for 3 s or longer, the mode will switch to setting mode.
In setting mode, the switch is used to enter set values.

## RESET/

## SHIFT

Use this switch to reset alarms
The switch can also be used to reset maximum and minimum values for display of maximum and minimum measurements.
In setting mode, the switch is used to move between setting items.

(5) Voltage input (3VT)

(4) Voltage input (2VT)

Notes:
${ }^{* 1}$ Analog outputs, contact outputs, and external operation inputs are options.
${ }^{* 2}$ Functionality for external operation input can be switched between external reset and external display switching by using settings.
${ }^{* 3}$ For contact outputs, you can select from the following:
pulse outputs, alarm outputs, or CPU error output. (by user specification)
${ }^{* 4}$ Secondary grounding for VT and CT is not required if a low-voltage circuit is used. Also, VT is not required if 110 V or 220 V direct input is used.

## Switchboard Instruments

## Power line multi-meters

## - Communications output terminal arrangement

(1) F-MPC Net
(2) RS-485, Modbus RTU
(3) CC-Link
(4) AnyWire

* Terminal resistance is connected internally by
shorting terminal 17 (DXB) and terminal 19 (Ter)
(Connect the terminal resistance only on a device
that is the terminal node in the connection configuration.)
- Mounting ZCT to ground wire (Be careful of ZCT polarity.) *4
(1) Single-phase, 3-wire (N-phase ground)

(2) 3-phase, 3-wire (S-phase ground)

Notes:
${ }^{* 1}$ Analog outputs, contact outputs, and external operation inputs are options.
Models with zero-phase current input have only leakage current measurement.
${ }^{\text {*2 }}$ Functionality for external operation input can be switched between external
reset and external display switching by using settings.
${ }^{*}$ For contact outputs, you can select from the following:
pulse outputs, alarm outputs, or CPU error output. (by user specification)
${ }^{*}$ Secondary grounding for VT and CT is not required if a low-voltage circuit is used.
Also, VT is not required if 110 V or 220 V direct input is used.

- Contact output combinations

|  | Contact output combinations |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  | Pulse + alarm | Alarm $\times 2$ | Pulse $\times 2$ | Pulse + CPU error | Alarm + CPU error |
| Contact output 1 | Pulse output | Alarm output 1 | Pulse output 1 | Pulse output | Alarm output |
| Contact output 2 | Alarm output | Alarm output 2 | Pulse output 2 | CPU error output | CPU error output |

■ Dimensions and mounting precautions

- Dimensions, mm

## - Mounting precautions

(1) The contrast of the LCD display depends on the angle at which it is viewed. Mount the display at the proper angle and position.

Upper mounting

Lower mounting

(2) Use a mounting panel with a thickness of 10 mm max. and mount the unit to the panel using the enclosed M5 nuts.
(3) Use a tightening torque of 2.75 to $3.82 \mathrm{~N} \cdot \mathrm{~m}$.

600A (Type: OTG-LA82)

## F-type panel instruments <br> 60 mm to 120 mm square

## ■ Description

The F-type is both small in size and budget-priced. Since they take a minimum of installation space they are best suited for motor starter, control center and distribution board applications. Meter cases are made of a highly attractive and durable plastic.

## Features

- Accuracy class: 2.5
- Meter scales are easy to read without error
- Compact design and budget-priced
- Meter accuracy is not affected by panel materials or adjacent currentcarrying conductors
- Complies with requirements of JIS C1102
- Dielectric test: 3320V AC, 5 sec

## C series transducers

## - Description

FUJI C series transducers are designed to convert various electrical characteristics of circuits into DC signals. Input and output circuits are isolated from each other. These transducers are ideal for handling the analog data input of microcomputer-incorporated control devices. Distorted waveforms from electronic power control devices can be accurately converted to DC signals with the innovative conversion methods used. (The r.m.s.-value method for voltage and current conversion, time-division multiplication for power conversion and differential method for frequency conversion.)

## Features

- Superb-quality, high-reliability design
- Complete isolation between input and output
- Strong construction
- Provided with terminal protective covers

■ Specifications and types

- AC voltage and current transducers/CAC

Accuracy: 0.5\%

Response time: $\quad 1.3$ s or less
Insulation resistance: $100 \mathrm{M} \Omega, 500 \mathrm{~V}$ megger
Dielectric strength: 2000 V AC, 1 min . between input and output circuits, between input circuit and power supply 2000 V AC, 1 min . between output circuit and power supply, output circuit and case (earth terminals)
Ambient temperature and humidity: -10 to $+50^{\circ} \mathrm{C}, 90 \%$ RH or less (no condensation)

Note: * Replace the marks $\square \square \mathbf{\Delta}$ in the type number by codes indicated in parenthesis.

## WF1MA self-powered, DC-isolated transducers

## - Features

- No power supply is required.
- Isolated between input and output circuits
- Snap-on mounting on IEC 35 mm rail
- Safe, secured connection of screw terminal with cover

■ Specifications

- Conversion performance

Accuracy: $\quad \pm 0.1 \%$ FS (full scale)
Temperature characteristic: $\pm 0.01 \% /{ }^{\circ} \mathrm{C}$ FS (Typ.)
Response: $\quad 50 \mathrm{~ms}$ or less ( 0 to $90 \%$ )
Load fluctuation: $+0.1 \% / 100 \Omega$ or less (at $250 \Omega$ or less)
$-0.1 \% / 100 \Omega$ or less (at $250 \Omega$ or more)

## - Input specifications

| Input signal |  | Internal <br> resistance | Max. allowable <br> current |
| :--- | :--- | :--- | :--- |
| Current <br> input | 0 to 20mA DC (common with <br> 4 to 20mA DC) | $250 \Omega$ | 30 mA |

- Output specifications

| Output signal |  | Allowable load <br> resistance |
| :--- | :--- | :--- |
| Current <br> output | 0 to 20 mA DC (common with 4 to 20 mA <br> DC) | $1 \mathrm{k} \Omega$ or less |

Internal voltage drop: 3.3 V or less
Ripple in output : $\quad 0.5 \%$ or less (at $250 \Omega, 200 \mathrm{~mA}$ load)

## - General specifications

Structure: Screw-terminal integrated structure
Connection: M3.5 screw terminal
Housing material: Black PC resin
Insulation resistance:
$100 \mathrm{M} \Omega$ or more ( 500 V DC)
Between input, output circuits, power supply, and ground
Dielectric strength:
1500 V AC, 1 min
Between input, output circuits, power supply, and ground

## - Installation specifications

Power supply: Not required
Operating temperature: -5 to $+50^{\circ} \mathrm{C}$
Operating humidity: $\quad 90 \%$ RH or less (no condensation)
Storage temperature: -10 to $+70^{\circ} \mathrm{C}$
Storage humidity: $\quad 60 \%$ RH or less (no condensation)

## ■ Ordering information

Specify the following:

1. Type number

## ■ Type number nomenclature

Note: The value of output signal is the same as that of the input signal (ratio: $1-1$ ). Example: $4-20 \mathrm{~mA}$ DC input - $4-20 \mathrm{~mA} \mathrm{DC} \mathrm{output}$

■ Dimensions, mm

Mass: Approx. 80g

■ Wiring diagram

## WF5HS high-speed, DC-isolated transducers

## Features

- 3 ports isolated between input, output circuits, and power supply
- Snap-on mounting on IEC 35 mm rail
- Saves wiring time by using push-terminal

■ Specifications

- Conversion performance

Accuracy: $\pm 0.25 \%$ FS (full scale)
Temperature characteristic: $\pm 0.02 \% /{ }^{\circ} \mathrm{C}$ FS (Typ.)
Response: 1 ms or less (0 to $90 \%$ )

## - Input specifications

| Input signal | Input impedance |  |
| :--- | :--- | :--- |
| Voltage <br> input | 0 to $5 \mathrm{~V}, 1$ to $5 \mathrm{~V}, 0$ to 10 V DC <br> -10 to $10 \mathrm{~V}, 0$ to $1 \mathrm{~V}, 0$ to 100 mV DC | Input impedance: <br> $1 \mathrm{M} \Omega$ or more |
| Current <br> input | 4 to 20 mADC | Internal resistance: <br> $250 \Omega$ |

## - Output specifications

| Output signal |  | Allowable load <br> resistance |
| :--- | :--- | :--- |
| Voltage <br> output | 0 to $5 \mathrm{~V}, 1$ to 5 V DC <br> 0 to $10 \mathrm{~V},-10$ to 10 V DC | $550 \Omega$ or more |
| Current <br> output | 4 to 20 mA DC | $550 \Omega$ or less |

Output adjustment - adjustable from front
Zero adjustment: -5 to +5\%
Span adjustment: 95 to 105\%

## - General specifications

Structure: Push-terminal integrated structure
Connection: Push-terminal
Solid wire of 1.4 mm dia., stranded wire of $1.5 \mathrm{~mm}^{2}$ or less
Housing material: Black polycarbonate resin
Insulation resistance:
$100 \mathrm{M} \Omega$ or more ( 500 V DC)
Between input, output circuits, power supply, and ground
Dielectric strength:
1500 V AC, 1 min
Between input, output circuits, power supply, and ground

- Installation specifications

Power supply:
$24 \mathrm{~V} \mathrm{DC} \pm 0 \%, 80 \mathrm{~mA}$ or less
Operating temperature: -5 to $+50^{\circ} \mathrm{C}$
Operating humidity: $\quad 90 \%$ RH or less (no condensation)
Storage temperature: $\quad-10$ to $+70^{\circ} \mathrm{C}$
Storage humidity: $\quad 60 \%$ RH or less (no condensation)

## ■ Ordering information

Specify the following:

1. Type number

Type number nomenclature

| WF5HS- $\square \square \mathbf{3 1}$ |  |
| :---: | :---: |
| Input signal | Power supply |

## WH7DC isolated DC transducers

## Description

The WH7DC isolated DC transducer is designed to convert a DC voltage or current values into a DC signal. Input and output circuits are electrically isolated from each other. These transducers are ideal for the amplifying and isolating minute signals that are output from a variety of sensors.

## - Features

- Power supply of 24 V DC. I/O circuits isolated from the power supply.

## - Applications

- Signal exchange between electrically isolated systems
- Prevention of control signal sneak currents
- Remote transmission of output signals

## - Standards

UL recognized and CSA File No. E206961

## ■ Specifications

| Type |  | WH7DC |

## ■Type number nomenclature

Note: • Black circles indicate low-range types.

- White circles $O$ indicate standard-range types that can be manufactured (the guaranteed accuracy ranges of thermocouples $R$ and $B$ are over $400^{\circ} \mathrm{C}$ and $800^{\circ} \mathrm{C}$ respectively).
- Compensation wires are used to compensate the difference in temperature between thermocouples and transducer terminals. Types of compensation wires are classified by color. Select the right one according to the thermocouple at site.
- Each transducer is shipped in combination with an RJC temperature resistance thermometer block. Use them in pairs
- A transducer with a lower limit burnout function is available on request.
- When the lower limit burnout function is triggered, the output of the transducer will scale out for a moment, then it will be set to the minimum value.

## WH7SP slow pulse transducers

## Description

The WH7SP slow pulse transducers are designed to convert ON-OFF pulse and voltage pulse signals into a DC voltage or current signal, isolating input and output circuits.

## ■ Features

- Power supply of 24 V DC, with dielectric strength 2000 V AC for 1 min and 4 ports isolated. (1000V AC for 1 min between output 1 and output 2)

## - Applications

- Flow rate control combined with various types of flow meters
- Monitoring automated machines and wind force combined with rotary encoder
- Speed control of rotating machines combined with pulse transmitter and controller

Standards

- UL recognized and CSA File No. E206961 (24V DC power supply models only)

## ■ Specifications

| Type |  |  | WH7SP |
| :---: | :---: | :---: | :---: |

Dimensions and wiring diagrams

## Transducers

WH7 series

## WH7DY isolation type transducers

## Description

The WH7DY transducers (isolation type distributor) are designed to use by combining 2 -wire type transmitter. The WH7DY supplies DC power to the transmitters on site through signal line and converts 4 to 20 mA DC signal generated by the transmitters into input signals suitable for monitoring and control equipment, isolating input and output circuits from each other. Pulse output signal can be output as the output 2 .

## - Features

- Power supply of 24 V DC, with dielectric strength 2000 V AC for 1 min and 4 -port isolated. (1000V AC 1 min , between output 1 and output 2)
- Short-circuit protection

## Standards

- UL recognized and CSA File No. E206961 (24V DC power supply models only)

## ■ Specifications

| Type |  | WH7DY |
| :---: | :---: | :---: |
| Power supply fro transmitter | Voltage | 24 to 28 V DC at no load |
|  | Current | Max. 22mA DC (short-circuit current: approx. 30mA) |
|  | Ripple | $0.1 \mathrm{~V}^{\text {P-P.P }}$ or less |
|  | Allowable short-circuit time | No limitation |
|  | Tolerance against load fluctuation | $2 \%$ or less at 0 to $100 \%$ load |
| Insulation method |  | Photocoupler |
| Accuracy |  | $\pm 0.1 \%$ |
| Temperature characteristic |  | $\pm 0.02 \% /{ }^{\circ} \mathrm{C}$ |
| Response time |  | 0.5s or less (0\% to 90\%) |
| Input signal (input impedance) |  | 4 to 20mA DC (250 2 ) |
| Input signal (with square root operation) |  | $\left.\mathrm{Y}=\sqrt{\frac{\mathrm{X}=(\text { Input } 0 \% \text { value })}{\text { Input span }}} \cdot \text { Output span }+ \text { (Output } 0 \% \text { value }\right)$ <br> Where: $\mathrm{X}=$ Input value, $\mathrm{Y}=$ Output value <br> E.g. If input $=4-20 \mathrm{~mA}$, output range $=4-20 \mathrm{~mA}$; <br> Output $\mathrm{Y}=\sqrt{\frac{20-4}{16}} \cdot 16+4=20 \mathrm{~mA}$ |
| Output 1 (Load resistance) | Voltage | 0 to 5 V DC ( $1 \mathrm{k} \Omega \mathrm{min}$.), 0 to 10 V DC ( $2 \mathrm{k} \Omega$ min.), 1 to 5 V DC ( $1 \mathrm{k} \Omega \mathrm{min}$.) |
|  | Current | 0 to $20 \mathrm{~mA} \mathrm{DC} \mathrm{( } 500 \mathrm{M} \Omega$ max.), 4 to $20 \mathrm{~mA} \mathrm{DC} \mathrm{( } 500 \mathrm{M} \Omega$ max.) |
| Output 2 (Load resistance) | Voltage | 1 to 5V DC ( $1 \mathrm{k} \Omega \mathrm{min}$.) |
|  | Current | 4 to $20 \mathrm{~mA} \mathrm{DC} \mathrm{(350M} \mathrm{\Omega} \mathrm{max)}$. |
| Zero adjustment range: Approx. $-5 \%$ to $+5 \%$ |  | Only the output 1 is adjustable with the WH7AJ adjuster. |
| Insulation resistance |  | $100 \mathrm{M} \Omega$ or more ( 500 V DC megger) |
| Dielectric strength |  | 2000V AC, 1 min. between input-output-power supply and ground $1000 \mathrm{~V} \mathrm{AC}, 1 \mathrm{~min}$. between output 1 and output 2 |
| Auxiliary power supply |  | 24 V DC $\pm 10 \%$ |
| Power consumption |  | Approx. 120mA at 24V DC |
| Ambient temperature and humidity |  | -5 to $55^{\circ} \mathrm{C}, 90 \% \mathrm{RH}$ or less (no condensation) |

[^2]- When ordering, specify the output frequency. The frequency can also be changed by the WH7PD PC loader.

## ■ Type number nomenclature

## WT2AC AC voltage and current transducers

## Features

FUJI WT2AC AC voltage and current transducers convert AC voltage/current into DC voltage/current, and also isolate input/output circuits and power supplies.

- Select from an 85 to 264 V AC, 24 V DC, or 110 V DC auxiliary power supply
- Three isolated ports: input, output, and power supply
- Thin profile and excellent cost performance
- Use either IEC 35 mm rail mounting or screw mounting
- Screw terminals with cover ensure safe, sure connection.

## - Performance

Accuracy: $\pm 0.4 \%$ FS
Temperature characteristic: $\pm 0.2 \% / 10^{\circ} \mathrm{C} \mathrm{FS}$ (Typical) Response time: 0.5 s max. ( 0 to $90 \%$ )
Insulation resistance: 100M (500V DC megger)
Withstand voltage: 2000V AC 1 min

## Input specifications

|  | Input signal | Input frequency |
| :--- | :--- | :--- |
| Voltage input | 0 to 110V AC | $50 \mathrm{~Hz}, 60 \mathrm{~Hz}$ |
|  | 0 to 150V AC  <br>  0 to 300V AC |  |
| Current input | to 1A AC <br>  <br> to 5A AC |  |

## ■ Output specifications

|  | Output signal | Permissible external <br> resistance |
| :--- | :--- | :--- |
| Voltage output | 0 to 10 mV | $10 \mathrm{k} \Omega$ or more |
|  | 0 to 100 mV | $100 \mathrm{k} \Omega$ or more |
|  | 0 to 1 V | $200 \Omega$ or more |

## CN232 and CN233 arresters (surge protective devices) for low voltage circuit

## - Description

Arresters (surge protective devices) protect devices connected to power supplies from lightning damage by absorbing inductive lightning surges from power supply.

## ■ Features

- Normal-mode surges and common-mode surges can be absorbed using only one arrester.
- Coordinated operation of 2 types of varistor enables extremely fast response to surges and a high level of surge absorption.
- Built-in thermal fuses prevent problems such as shortcircuit due to deterioration of elements.
- Indicators for easy confirmation of device status (i.e., normal or malfunction)
- Integrated terminal construction reduces space and wiring requirements for easier handling of the arrester.
- Mount to rails, using screws, or to brackets for standardized distribution boards.
- Standard-feature terminal cover to protect against electrical shock

## - Applications

- Electronic devices, such as computers, measurement devices, and communications devices
- Inverters
- Electronic devices inside distribution boards (e.g., power distribution boards and lighting distribution boards)

## Arresters

## CN226 series

## CN226 series arresters (surge protective devices) for signal line and control circuit

## ■ Features

- Highly effective surge suppression using protection method combining gas discharge tube, varistor, and avalanche diode.
- Large surge discharge current
- Fast response to surges reduces influence on device.
- A comprehensive lineup to suit all kinds of signal line applications (e.g., transducers, remote terminals, and sensors).
- Simple mounting to IEC rail.
- The arrester mounts to the terminal block using a plug-in connection for simple inspection and replacement. Signal lines are not opened even if the arrester is removed.

[^3]
## ■ Ambient conditions

- Ambient operating temperature: -20 to $50^{\circ} \mathrm{C}$ (No condensation)

## ■ Ordering information

Specify the following:

1. Type number or ordering code

- Relative operating humidity: $45 \%$ to $85 \%$ (No condensation)
- For indoor use

## - Internal wiring

■ Application circuit example

Note: When using a CN226-100A arrester, use a plug fuse (AFaC-30X) for disconnection and short-circuit protection.

■ Dimensions, mm

## Arresters

## CN227 series

## ■ Features

The arrester protects network circuits from lightning surges.

- Communications networks are supported (e.g., 10Base-5, 100Base-TX, RS-485, PLC T-Link).
- Ideal design for applications with high-performance in protection against lightning surges.
- Support for CN227-EBT

High-speed communications (100Mbps min.) enables highperformance response to surges.
Compact, lightweight, and easy to connect (RJ-45 modular connector).

- CN227-EB5

Extremely small signal loss enables high-performance response.
Easy installation and replacement (mounting bracket and grounding wire included).

- CN227-RS42, RS44

The body is slim ( 22.5 mm wide) and European-style terminal blocks are used.
Types are available to support 2-wire (RS42) or 4-wire (RS44). The arrester provides a long service life and high surge resistance ( $10 \mathrm{kA}, 8 / 20 \mu \mathrm{~s}$ ) and protection characteristics that satisfied categories C2 and D1 of the JIS C 5381-21 standard.

## $\square$ Wiring method

## ■ Grounding wiring

The arrester protects network circuits from lightning surges.

## - CN227-RS44A

- Application
- Devices are protected from lightning surges that may enter instrument cables or control cables of RS-485, 24V DC-max. signal circuits.

## - Features

- Entrance of high-frequency noise from arrester grounding circuits is prevented.
- Protection characteristics satisfy categories C2 and D1 of the JIS C5381-21 standard.
- Use of screwless connection terminals eliminates the need for crimp terminals.
- IEC rail mounting.
- CN227-350S
- Application
- Broadcasting equipment is protected from lightning surges that may enter broadcasting speaker circuits or 100/200V-AC contact signal circuits.

## ■ Features

- Protection characteristics satisfy categories C2 and D1 of the JIS C5381-21 standard.
- Use of screwless connection terminals eliminates the need for crimp terminals.
- IEC rail mounting.
- CN227-SD
- Application
- Communications equipment is protected from lightning surges that may enter telephone lines or other communications lines.

## - Features

- Protection characteristics satisfy categories C2 and D1 of the JIS C5381-21 standard.
- Use of screwless connection terminals eliminates the need for crimp terminals.
- IEC rail mounting.
- CN227-UCP
- Application
- Communications equipment is protected from lightning surges that may enter telephone lines or other communications lines.

## ■ Features

- Support for UCS (universal connection system).
- Modular plug-in for high-density wiring system.
- Equipped with failure display.

## - CN227-NT

## - Application

- Equipment is protected from lightning surges that may enter coaxial cables of ITV and monitor cameras or data transmission devices.

## - Features

- Ideal protection for ITV coaxial lines with weak withstand voltage.
- Transmission noise is absorbed with improved production characteristics by combining gas discharge tubes at noise filters.
- Protection characteristics satisfy categories C2 and D1 of the JIS C5381-21 standard.
- IEC rail mounting.
- Ideal for transmission lines on which a DC power supply ( 30 V $\mathrm{DC}, 250 \mathrm{~mA}$ max.) is superimposed on the coaxial.

## - CN227-TV

- Application
- Devices are protected from lightning surges that may enter coaxial cables for a satellite digital TV.

## - Features

- Composed with coaxial connectors and high-performance gas discharge tubes.
- Compact size with high impulse resistance.
- Excellent transmission performance (large frequency bandwidth and little insertion loss).

## Arresters

## $\square$ Overview and features

- The AS-i arrester protects AS-interface modules connected to AS-i networks and networks from overvoltage due to inductive lightning surge and switching surge.
- Only the AS-i arrester is required to protect AS-i signal circuits and auxiliary power supply circuits.
- The construction, network connectivity, and protection level (IP67) of the AS-i arrester are the same as for waterproof connector slaves (slim type).
- The AS-i arrester does not require assigning addresses in the AS-interface network.
- A FM6B1-04FE or FM6B2-04FE slave base is required to connect the AS-interface cable (yellow) and auxiliary power supply cable (black).

Fuji Electric FA Components \& Systems Co., Ltd./D \& C Catalog

## - Application circuit example

## Arresters <br> CN2340, CN2341

## ■ Features

Single-pole arrester with gas discharge tube. Is important to use the same equipotential bonding and ground when building systems to protect against lightning.
Sometimes, however, various types of grounds are independently installed inside equipment, and grounding circuit arresters enable potential equalization between grounding polls.

- CN2340: Used when the same ground cannot be used between power circuits.
(For example, performing grounding with provisions based on electrical equipment technology standards, such as independent B -type grounding.)
- CN2341: Used when the same ground cannot be used for power circuits and control circuits.

(For example, performing independent grounding of devices to prevent noise from entering, such as with inverter grounding.)
- With a rail mounting construction that is 18 mm wide, the design is ideal for applications.

■ Ratings, specifications, types, prices (excluding tax), and shipment

## Description

The FUJI low-voltage instrument transformers are available as current transformers and potential transformers. These transformers have a *maximum voltage of 1150 V and are suitable for circuits up to 600 V . Windings have excellent mechanical, thermal and electrical performance since CT's are molded in polyester resin and VT's in epoxy resin. They are also moisture proof and have good insulation properties. The laminated iron core is made of oriented silicon steel strip. Both VT's and CT's have a class 1.0 accuracy rating, and conform to the requirements of JIS C 1731, JEC 1201 and other standards.
Current transformers are available in either through-type or primary-winding versions.
*Maximum voltage: $\frac{\text { Nominal voltage }}{1.1}$

## - Low voltage current transformers

CC3L

The CC3L type is a round hole throughtype current transformer. The ratio can be changed according to the number of turns of the primary windings. It has excellent insulation characteristics and is both compact and light in weight.

CC3P

The CC3P type is a current transformer which has a primary winding thus facilitating connection work.
The installation angle can be varied from the standard position through $90^{\circ}$. They can be supplied with the primary current rating from 5 to 50 Amps.

CC3M

AF00-107
The CC3M type is a current transformer which has a flat terminal primary winding. It is used in the bus section of the load center or the control center. It can be mounted either horizontally or vertically.

## CC2

AF99-266
The CC2D and 2C current transformers are split-types. The CTs can be mounted to existing panels, such as control centers or load centers, to measure or monitor the wattage. These can be mounted without removing existing cables for easier installation. Rated primary currents are available from 5 to 1200A.

Low voltage potential transformers CD 32, 34

AF00-215
The CD32 and CD34 transformers are low-voltage types. Types with a fuse of a 100kA interrupting capacity have been added to the series. This series is available for burdens of 15 and 50VA.

## Instrument Transformers <br> Through-type CT/CC3L

## CC3L round hole through-type current transformers

Primary current: 60 to 750 A
Secondary current: 5A or 1A

## Description

The CC3L transformers are round-hole through-types. A double-mold structure gives CC3L transformers excellent moisture resistance and good insulation properties.

The CT ratio can be changed freely by changing the number of primary winding turns. Consequently, these CTs are highly adaptable and economical.
Select from a lineup of three types with rated burdens of $5 \mathrm{VA}, 15 \mathrm{VA}$, and 40 VA .
The mounting base can be rotated anywhere in a $90^{\circ}$ range to facilitate installation.

Ordering information
Specify the following:

1. Type number

CC3L1: 250, 300, 400A
CC3L2: 240, 250, 300, 400A

CC3L2: 150, 160, 180, 200A

CC3L3: 240, 250, 300, 400A

## - Number of turns in the primary winding and CT ratio

The following table lists the rated primary current, number of turns of primary windings, and the maximum nominal cross-section area
of the 600 V IV cable that can pass through. ( $\varnothing$ indicates the diameter of a single wire.)
The table data satisfies allowable current for
a 600 V IV cable at an ambient temperature of $40^{\circ} \mathrm{C}$.

Note: The rated primary current is given for one turn of the primary winding.

## CC3P current transformers with primary winding

Primary current: 5 to 50 A
Secondary current: 5 A or 1 A

## Description

CC3P CTs support primary winding for easy wiring.
The mounting base can be rotated anywhere in a $90^{\circ}$ range to facilitate installation. A double-mold structure gives CC3P CTs excellent moisture resistance and good insulation properties.

Select from a lineup of three types with rated burdnes of $5 \mathrm{VA}, 15 \mathrm{VA}$, and 40 VA .

## CT with primary winding/CC3P

## - Type number nomenclature

- Dimensions, mm

## CC3P1: 1 to 30A

CC3P1: 40,50A CC3P2, CC3P3

CC3M rectangular hole throughtype current transformers Primary current: 150 to 6000A Secondary current: 5A

## Description

CC3M CTs can be mounted vertically or horizontally by changing the position of the mounting base. Also, the busbar can be mounted directly using a mounting bracket as illustrated, so a busbar mounting angle or holes are not required.

Notes: *1 Busbar mounting brackets are sold separately. When ordering, specify the CT type number and rated primary current. If the rated primary current is 1000 to 2000A, also specify the number of busbars required.
${ }^{* 2}$ Epoxy resin mold is used to isolate rated primary currents of 5000 or 6000A.

- CC3M CTs are mounted vertically at the factory.
- Replace the $\square$ mark by the secondary current code. 5: 5A 1: 1A

## ■ Dimensions, mm

## Direct busbar mounting

CC3M2 CTs with a rated primary current of 150A or CC3M3 CTs with a rated primary current of $200 \mathrm{~A}, 250 \mathrm{~A}$ or 4000 to 6000 A cannot be mounted directly to a busbar because the CT is too heavy for the cross section of the busbar.

The busbar must be located in the center of the through hole of the CT. Be sure that the busbar does not come into contact with the wall of the through hole.

- Single busbar mounting

Fuji Electric FA Components \& Systems Co., Ltd./D \& C Catalog

Split type current transformers, CC2
Primary current: 5 to 1200A
Secondary current: 7.34 mA to 1 A

## Description

The CC2D and CC2C are split-type current transformers. The CT can be mounted to existing panels, such as control centers or load centers, to measure or monitor wattage. These CTs can be mounted without removing existing cables for easier installation.
Five rated burdens are available: $0.26 \mathrm{mVA}, 44.4 \mathrm{mVA}$, $0.18 \mathrm{VA}, 0.5 \mathrm{VA}$

## Instrument Transformers

Voltage transformers/CD32, 34

## CD32 and CD34 potential transformers

Primary: 220V, 440V
Secondary: 110V

## Description

The CD32 and CD34 transformers are of double-mold structure that provide excellent characteristics, such as thermal resistance and moisture resistance.
VTs with a fuse of a 100kA interrupting capacity have been added to the series. The accuracy class of a type with a rated burden of 15 VA is $1.0,1 \mathrm{P}$ and that of a type with a rated burden of 50VA is
 3.0, 3P.

A transparent insulation cover is available for the terminal and fuse mounting blocks.

CD32N, CD34N

Panel drilling

With insulation cover

Optional accessories

- Insulation cover

Type: CD3C
Applicable VT: CD32, 34

## Mounting insulation cover

Slightly open the A-part of the insulation cover outward. Mount the cover to the VT so that the protruding portions of the VT are inserted into the holes of the insulation cover.

- Insulation caps for low-voltage current transformer

Type: SB-4064-23
Applicable CT: CC3L, CC3P and CC2N
Insulation caps can be mounted without removing the crimp terminals on the CT.
The terminals are completely covered with the insulation caps so that no live part is exposed.
These caps are translucent to that the terminal connections can be checked externally.

## Automatic power factor regulator QC06E, QC12E

## - Description

Automatic power factor regulator (APFR) is a device which is designed to maintain the target power factor by regulating lagging or leading current. The APFR is designed to monitor the reactive power within the circuit continuously and to provide ON/OFF signals automatically to control circuit breakers in a capacitor bank. In an electrical network such as an industrial plant using induction motors which produce reactive power, the power factor will drop. This will cause a power loss, a line voltage drop and other disadvantages. In conventional electrical systems the efficiency of transmission and distribution equipment is improved by installing fixed capacitors across the line. However, an over-compensation may arise when there is a light load, such as at night, which would result in an increase in line voltage and excess current. The APFR supervises the power factor in the system, and controls the power factors by switching capacitors ON or OFF as the situation requires in the face of a reactive leading or lagging load.

## Low power loss

Correcting the power factor with a power capacitor reduces the line current. This also reduces the power loss caused by the resistances of the power cables and transformer windings.

## Effective use of power receiving facility

Correcting the power factor with a power capacitor reduces the line current. Since this produces margins in the transformer capacity and the current-carrying capacity of cables, a heavier load can be carried without adding more facilities.

## Stable supply voltage for long equipment service life

 A reactive power, especially a leading reactive power at a light load (at night), often produces an overvoltage and shortens the service life of lamps. Use an automatic power factor regulator to suppress a voltage decrease at a heavy load and a voltage increase at a light load.
## Laborsaving unmanned operations

This regulator outputs capacitor connection and disconnection commands automatically to maintain an optimum power factor. The simple setup for this output saves labor applied to power factor correction.

## Features

- Compact (DIN size) and lightweight

The DIN-size compact unit permits easy mounting hole on the panel and enhances work efficiency.
The 6-bank and 12-bank models have front panels of the same size ( $144 \mathrm{~mm} \times 144 \mathrm{~mm}$ ). Since in the panel cutout hole sizes are also the same ( $138 \mathrm{~mm} \times 138 \mathrm{~mm}$ ), it is possible to use panel cutout holes of one uniform size.

## - 220 V and 440 V power supplies

The regulator can be connected to a 220 V or 440 V power supply. Set the voltage input switch on the front panel to the control power supply voltage being used.
Connect control power cables to the correct terminals of the terminal block in accordance with the control power supply voltage being used.

- Automatic setting of control level by microcomputer The mode and data are set simply by using four keys. The microcomputer automatically sets the levels at which capacitors should be connected or disconnected.
- Three types of capacitor connection and disconnection control by purpose

## 1. Cyclic control or optimum control (automatic

 selection)Under cyclic control, capacitors of the same capacitance are connected and disconnected in ascending order of capacitor number.
Under optimum control to keep the number of connections and disconnections minimal, a capacitance change is calculated from the measured reactive power and the target power factor and a capacitor of the nearest capacitance is connected or disconnected.
Either control is selected in accordance with the set capacitor capacitance.

## 2. Unconditional cyclic control

Capacitors are controlled cyclically, irrespective of their capacitances.

## 3. Multistep control

Capacitors having capacitances incremented in multiples of two (e.g. 1:2:2:2:2:2:, $1: 2: 4: 4: 4: 4$, and 1:2:4:8:8:8) are simultaneously connected or disconnected to optimize the capacitance with a minimal number of steps.

## Power Factor Controllers <br> Automatic power factor regulators <br> QC06E and QC12E

## - Useful functions

## 1. Polarity error diagnosis function

If a polarity error in wiring is detected, the regulator lights the alarm lamp and sounds the buzzer to indicate the miswiring.

## 2. Forced disconnection function

To protect capacitors from being damaged or reactors from being burnt by excessive harmonics, or to disconnect capacitors unconditionally at night, external time switch signals can be input to the regulator. The signals automatically disconnect the connected capacitors in proper order.

- Automatic capacitor disconnection at light load When the load of a power line decreases at night, the connected capacitors may increase the leading reactive power and cause an overvoltage.
A voltage increase on the power receiving side will shorten the service life of lamps and other load equipment.
To prevent an excessive leading power factor at a light load, the regulator automatically disconnects capacitors.

- Abundant regulator status information display

Automatic power factor regulators
QC06E and QC12E

- Specifications

| Item |  | Specification |  |
| :---: | :---: | :---: | :---: |
|  |  | QC06E | QC12E |

## 1. Mode symbol

Displays the set mode (mode symbol) or the kind of measurement data.

## 2. Setting and measurement data

## - Data setting mode

The digital LED display displays the following setting data:

| Mode symbol | Setting item | Setting data | Setup at shipment |
| :---: | :---: | :---: | :---: |
| 1 to 9 | Capacitance of capacitor C1 to C9 * | 0 to 9999kvar *1 | 0 |
| o, b, c | Capacitance of capacitor C10, C11, C12 *6 | 0 to 9999kvar *1 | 0 |
| A | Capacitor control system | 1 to 5 *2 | 1 |
| C | CT ratio | 1 to 1200 * | 0 |
| F | Target power factor | 85 to 100\% | 98 |
| L | Disconnection at light load | 0 to 9999kW *4 | 0 |
| d | Delay time | $\begin{aligned} & 30,60,120, \\ & 300, \text { or } 600 \mathrm{~s} \text { *5 } \\ & \hline \end{aligned}$ | 300 |

## Notes:

*1 When the capacitance is set to 0 or 9999 , the control output contact goes ON for 0 or OFF for 9999 during automatic operation.
*2 See the table at right for the meanings of the capacitor control system numbers.
${ }^{*} 3$ The CT ratio is set to 0 when the regulator is shipped from the factory. Set this value to accommodate the use requirements. The regulator does not operate automatically when the set value is 0 or 1201 or greater.
*4 When the set value is 0 , the light-load disconnection function is not activated. To disconnect capacitors when the load becomes light, set the minimum capacitor capacitance.
*5 Select an optimum delay time for the capacitor discharging unit. (Set "300" or "600" if a discharging resistor is used.)
*6 The mode symbols are 1 to 6 (C1 to C6) for type QC06E and 1 to $9, o, b$, and c (C1 to C12) for type QC12E.

## - Auto operation mode

When the Up ( $\sqrt{\wedge}$ ) and Down ( $\sqrt{\vee}$ ) keys are pressed at the same time, the LED display displays measurement data in the following order:

| Model <br> symbol | Display item | Measurement data display |
| :---: | :--- | :--- |
| $(-)^{* 7}$ | Power factor | -0 to 100 to $0 \%$ |
| $(-)^{* 7}$ | Reactive power | -9999 to 0 to $9999 \mathrm{kvar}{ }^{* 8}$ |
| A | Active power | 0 to $9999 \mathrm{~kW}{ }^{* 8}$ |
| $U$ | Primary voltage | 0 to $9999 \mathrm{~V}{ }^{* 8}$ |
| I | Primary current | 0 to $6000(5 X 1200) \mathrm{A}$ |
|  | No display | - |

Notes:
*7 No mode symbol is displayed for a lead; a negative sign (-) is displayed for a lag.
*8 The LED display always displays " 9999 " for any value greater than 9999.

## Capacitor control system

| Set <br> value | Description |
| :---: | :--- |
| 1 | Cyclic/optimum control |
| 2 | Unconditional cyclic control |
| 3 | Multistep control (capacitance ratio: 1:2:2:2:2:2:2:2:2:2:2) |
| 4 | Multistep control (capacitance ratio: 1:2:4:4:4:4:4:4:4:4:4) |
| 5 | Multistep control (capacitance ratio: 1:2:4:8:8:8:8:8:8:8:8) |

## Automatic power factor regulators

 QC06E and QC12E
## 3. AUTO/SET mode

The green lamp lights in the auto operation mode and the red one in the data setting mode.

## 4. Power factor status

Light load: The yellow lamp lights when the active power of the circuit is equal to or lower than the set level for light-load disconnection.

## $\triangle$ Lead:

The red lamp lights when the reactive power of the circuit is leading, compared to the set level for disconnection.

## Acceptable:

The green lamp lights when the reactive power of the circuit is within the optimum control range.
Lag $\nabla$ :
The red lamp lights when the reactive power of the circuit is lagging, compared to the set level for connection.

## 5. Unit of setting or measurement data

A green lamp lights at \%, kvar, kW, V, or A.

## 6. Capacitor connection status

The red lamps light at the capacitors for which the capacitor control output contacts are ON (make) and go out at the capacitors for which the contacts are OFF (break).

## 7. Input voltage selection switch

Set this switch to "200V" for 200/220V input power or " 400 " for $400 / 440 \mathrm{~V}$ input power.

## 8. Polarity diagnosis switch

The polarity switch must initially be toggled to " + ". Toggle the polarity diagnosis switch to the right to check the voltage or current input polarity. If the polarity is incorrect, " $\mathrm{C} \square \square 3^{\prime}$ " is displayed and the buzzer sounds.

## 9. Polarity switch

If the voltage or current input polarity is incorrect, toggle this switch to "-" and press the enter key to clear the error display and stop the buzzer. The regulator then operates normally because the input polarity is handled as being reversed.

## 10. AUTO/SET select key

Press this key to select the auto operation or data setting mode.

## 11. Up/down keys

Use these keys to select a data setting mode.
Use these keys to increment (+1) or decrement ( -1 ) a numeric value in each setting mode.

## 12. Enter key

After selecting a data setting mode, start numeric input. The numeric display changes from being continuously lit to blinking.
Press this key to confirm a set value in each data setting mode. The value is stored in the internal memory and the numeric display changes from blinking to being continuously lit.

Press two keys of the four keys, ( $\frac{\mathrm{A} \mathrm{AVOO}_{\text {STO }}}{\checkmark} \wedge$ and ENT ), at the same time for the following operation or display:

## - Data setting mode

Clears the set value to 0 . (This key operation is effective only when the mode symbol is 1 to $9, o, b, c, C$, or $L$ and the numeric display is blinking.)

Resets the set value to the shipping setup. (This key operation is effective only when the mode symbol is 1 to 9,0 , $\mathrm{b}, \mathrm{c}, \mathrm{C}$, or L and the numeric display is blinking.)
(Keep the keys depressed for five seconds or longer.)

## Auto operation mode

Changes the measurement data display. (Each time the keys are pressed, the display changes in the following order: power factor, reactive power, active power, primary voltage, primary current, and no display. The initial display at poweron is always power factor data.

Tests a capacitor connection. (Press the keys at the same time for reactive power lag display. Keep the keys depressed to connect the capacitors in the specified order.)

Tests a capacitor disconnection. (Press the keys at the same time for reactive power lead display. Keep the keys depressed to disconnect the capacitors in the specified order.)

JD006: QC06, 6 circuits
JD012: QC12, 12 circuits

## Ordering information

Specify the following:

1. Type number or ordering code
2. Input voltage and current
3. Operating voltage
4. Number of connectable capactor banks

# Power Factor Controllers <br> Automatic power factor regulators <br> QC06E and QC12E 

## ■ Operation of automatic power factor regulator

## - Cyclic control

Under cyclic control/optimum control, the regulator connects and disconnects capacitors of the same capacitance cyclically.
Under unconditional cyclic control, the regulator connects and disconnects capacitors of different capacitances cyclically, irrespective of the set capacitance.

## 1. Capacitor connection

When the reactive power exceeds the level at which more capacitors should be connected, the red lag lamp lights. If the red lamp remains lit for the set delay time or longer, the corresponding capacitor control output goes ON and the red lamp for the capacitor bank lights.
When the reactive power of the circuit is still over the connection control level and the red lag lamp remains lit, the capacitor control output for the next capacitor goes ON after the delay time. The capacitor control outputs go ON one by one at the delay time intervals until the reactive power level of the circuit falls within the allowable range.

## 2. Capacitor disconnection

The red lead lamp lights when the circuit load decreases and the connected capacitors increase the leading reactive power of the circuit beyond the level at which a capacitor should be disconnected. When the red lead lamp remains lit for the set delay time or longer, the corresponding capacitor control output goes OFF and the red lamp for the capacitor bank goes OFF.
The capacitors are disconnected in the order of their connection.
The capacitor control output for each capacitor is turned OFF at every delay time interval until the reactive power level falls within the allowable range.

## - Optimum control

Under optimum control, the regulator connects or disconnects the capacitor with the capacitance closest to the change of reactive power among capacitors of different capacitances. If there are two or more capacitors of the same capacitance, the regulator connects or disconnects the capacitors cyclically for optimum control (the number of switchings) match.

## 1. Capacitor connection

The red lag lamp lights when the reactive power level exceeds the level at which more capacitors should be connected. The regulator calculates the difference between the current reactive power and the level at which more capacitors should be connected, and integrates the calculated value for the set delay time. The average value per unit time is calculated from the integrated total and a capacitor having the capacitance closest to the average value is selected. The capacitor control output for the capacitor is turned ON and the red lamp of the capacitor bank lights.
The regulator continues integrating and averaging the differences between the current reactive power level and the level at which more capacitors should be connected, and selecting optimum capacitors. The capacitor control output is turned ON repeatedly until the reactive power of the circuit falls within the allowable range.

Figure 1 shows an example of a capacitor connection control with a load variation pattern.

## 2. Capacitor disconnection

When the circuit load decreases, the already-connected capacitors increase the leading reactive power level. If the reactive power level exceeds the level at which capacitors should be disconnected, the red lead lamp lights. The regulator calculates the difference between the current reactive power level and the level at which capacitors should be disconnected, and integrates the calculated value for the set delay time. The average value per unit time is calculated from the integrated total and a capacitor having the capacitance closest to the average value is selected. The capacitor control output for the capacitor is turned OFF and the red lamp of the capacitor bank goes OFF.

The regulator continues integrating and averaging the differences between the current reactive power level and the level at which capacitors should be disconnected, and selecting optimum capacitors. The capacitor control
output is turned OFF repeatedly until the reactive power level of the circuit falls within the allowable range.
Figure 2 shows an example of capacitor disconnection control with a load variation pattern.

Fig. 1

Fig. 2

# Power Factor Controllers <br> Automatic power factor regulators QC06E and QC12E 

## - Multistep control (step-by-step control)

Under multistep control, the regulator connects or disconnects in units of the minimum capacitance set at C1 in accordance with the changes of the reactive power to approximate the power factor to the target value.
The power factor at a light load can be controlled in the same way.

## 1. Capacitor connection

When the reactive power level exceeds the level at which more capacitors should be connected, the red lag lamp lights. If the red lamp remains lit for the set delay time or longer, the capacitor control outputs for the next step go ON or OFF and the red lamps of the capacitors light or go OFF. If the reactive power level of the circuit is still over the level at which more capacitors should be connected and the red lag lamp remains lit, the capacitor control outputs for the next capacitor go ON or OFF after the set delay time.

The capacitor control output is turned ON or OFF sequentially at the delay time intervals until the reactive power level of the circuit falls within the allowable range.

## 2. Capacitor disconnection

The red lead lamp lights when the load decreases and the connected capacitors increase the leading reactive power level of the circuit beyond the level at which capacitors should be disconnected. When the red lamp remains lit for the set delay time or longer, the capacitor control outputs for the next step go OFF or ON and the red lamps of the capacitor banks go OFF or light.
The capacitor control output is turned OFF or ON sequentially at the delay time intervals until the reactive power level of the circuit falls within the allowable range.

| Operation | Key operation | Remarks |
| :---: | :---: | :---: |
| Changing measurement display | $A+v$ <br> Press at the same time． | The measurement data display changes cyclically in the following order： Power factor，reactive power，active power，primary voltage，primary current， and no display．The initial display at power－on is power factor data． |
| Testing capacitor connection | 人 + ENT Press con－ tinually at the same time． | For the operation sequence，operation time，and other details，refer to the instruction manual． |
| Testing capacitor disconnection | $\qquad$ $\qquad$ Press con－ tinually at the same time． |  |
| Stopping the buzzer giving error notification during diagnosis |  | Any key may be pressed． |
| Changing mode to data setting |  |  |

## Power Factor Controllers <br> Automatic power factor regulators QC06E and QC12E

## - Data setting procedure

## - Set the following items

1. Capacitor capacitance: Capacitor 1 (150kvar) to 3 (150kvar)
2. Capacitor control mode (example): 2
3. CT ratio (example): 20 (current transformation ratio: 100/50)
4. Target power factor: 100(\%)
5. Minimum load: 100(kW)
6. Delay time: 120(s)

- Data setting and change procedure

Note:
${ }^{* 1}$ The initial value setup in mode 1 is always displayed at the first power-on after the unit is delivered from the factory, or displayed if all data have been reset to the factory setup.
${ }^{* 2}$ Although 0 is set at shipping from the factory, check the setup by incrementing the capacitor numbers with this key.

## - Supplemental explanations

1. Mode symbols 1 to 9 and o, b, c.

- The capacitor bank is never connected when the capacitance is set to 0 .
- The capacitor bank is never disconnected when the capacitance is set to 9999.
- When multistep control is selected, only the capacitance of mode symbol 1 becomes valid. No data needs to be set for mode symbols 2 to 9 and o, b, c.

2. Capacitor connection and disconnection

| Mode <br> symbol | Set value | Description |
| :--- | :--- | :--- |
| A | 1 | Cyclic/optimum control |
|  | 2 | Uncondentional cyclic control |
|  | 3 | Multistep control, <br> capacitance ratio 1:2:2:2:2:2:2:2:2:2:2:2 |
|  |  | Multistep control, <br> capacitance ratio 1:2:4:4:4:4:4:4:4:4:4:4 |
|  |  | Multistep control, <br> capacitance ratio 1:2:4:8:8:8:8:8:8:8:8:8 |

A capacitor discharger recommended for multistep control of A3, A4, or A5 is a discharging coil which reduces the residual voltage of the capacitor to 50 volts or less within five seconds.
3. If " $100 \%$ " is set as the target power factor of mode symbol F , a control of leading reactive power is performed.
4. Set the minimum load value to one slightly higher than the actual minimum load of the equipment to ensure an accurate light-load disconnection even when the measuring error or circuit constant fluctuates slightly.

Example: When the actual minimum load of the equipment is 100 kW , set the value to $120 \mathrm{~kW}(100 \times 1.2)$.

## Note:

Select a delay time suitable for the capacitor discharger. When using a discharging resistor, set the delay time to 300s (5min) or 600s (10min). An inappropriate delay time may damage capacitors or reduce their service lives.

## Calculating CT ratios

## - CT ratio

Example: When the primary current is 400A and secondary current is 5 A .
$400 \div 5=80$
CT ratio $=80$

- Determining capacitances and number of capacitor banks to improve the power factor by switching-on capacitors
The capacitances and the number of capacitor banks are determined as follows:
- For capacitors having the same capacitances

When load variation (increase and decrease of load) is frequent.

## 1. Determining the target power factor

Consider how far the power factor can be improved from the current value by automatic control.

## Example

Current power factor (before improvement): 0.8
Target power factor (after improvement): 0.98
Maximum demand power: 1000kW
$\theta$ : Favtor: $\theta$
P: Active power
Q: Reactive power
S: Max. demand power
$\operatorname{COS} \theta$ : Target power factor
$\operatorname{COS} \theta_{0}$ : Improve the power factor

2. Calculating the capacitances needed to improve the power factor
See the capacitor selection chart (Page 09/101) to calculate the necessary capacitance.

## Example

To improve the power factor from 0.8 to 0.98 , the factor $\mathrm{K}_{1}$ should be 0.54 . Therefore, the necessary capacitance (Cm) is obtained as follows:
$\mathrm{Cm}=$ Maximum demand power $\times \mathrm{K}_{1}=1000 \mathrm{~kW} \times 0.54=540 \mathrm{kvar}$ The necessary capacitance is 540kvar.

## 3. Calculating the target reactive power

Calculate the target reactive power from the target power factor (after improvement) and the maximum demand power.

## Example

The target value is calculated using the factor $\mathrm{K}_{2}$ selection table. (Page 09/101)
Target power factor: 0.98
$\mathrm{K}_{2}=0.2$
The target reactive power $\left(Q_{1}\right)$ :
$\mathrm{Q}_{1}=$ Maximum demand power $\times \mathrm{K}_{2}$
$=1000 \mathrm{~kW} \times 0.2$
=200kvar

## 4. Determining the number of capacitor banks

Determine the number of capacitor banks from the necessary capacitance for power factor improvement and target reactive power.

## Example

Determine the number of capacitor banks as follows:
$\mathrm{n}=\underline{\text { Necessary capacitance for power factor improvement (Cm) }}$ Target reactive power ( $\mathrm{Q}_{1}$ )
(1) If $n \geq 6$, the number of banks should be six.
(2) If $\mathrm{n}<6$, the number of banks should be n .
(Round up any fraction)
In this example,
$\mathrm{n}=\frac{540 \mathrm{kvar}}{200 \mathrm{kvar}}=2.7<6$
If the fraction is rounded up, the number of necessary banks is 3 .
Note: The necessary capacitance for power factor improvement (Cm) means the total capacitance to be controlled by this unit.

## 5. Calculating the capacitance per capacitor bank

If each bank should have the same capacitance, the capacitance needed to improve the power factor must be divided by the number of banks calculated at step 4.

## Example

Capacitance per capacitor bank:
$\mathrm{Co}=\frac{\text { Capacitance needed to improve the power factor (Cm) }}{\text { Number of capacitor banks (n) }}$
In this example,
$\mathrm{Co}=\frac{\mathrm{Cm}}{\mathrm{n}}=\frac{540 \mathrm{kvar}}{3(\text { banks })}=180 \mathrm{kvar}$
Since there are no 180kvar capacitors, a 200kvar-capacitor can be used.

## - For capacitors having unequal-capacitances

When load variation is a slight and stable all the year round.
Target power factor and the necessary capacitance for power factor improvement are calculated using step 1 and 2.

Current power factor (before improvement): 0.8
Target power factor (after inprovement): 0.98
Necessary capacitance for power factor improvement (Cm): 540kvar
For load variation as shown below, calculate the reactive power variation using $\mathrm{K}_{1}$.

## Example

- When $P_{1}$ is $150 \mathrm{~kW}, Q_{1}=P_{1} \times K_{1}=150 \times 0.54=81 \mathrm{kvar}$

Capacitor $\mathrm{C}_{1}=100 \mathrm{kvar}$
-When $\mathrm{P}_{2}$ is $400 \mathrm{~kW}, \mathrm{Q}_{2}=216 \mathrm{kvar}$
Capacitor $\mathrm{C}_{2}=\mathrm{Q}_{2}-\mathrm{C}_{1}=116 \mathrm{kvar}, \mathrm{C}_{2}=150 \mathrm{kvar}$

- When $P_{3}$ is $600 \mathrm{~kW}, Q_{3}=324 \mathrm{kvar}$

Capacitor $\mathrm{C}_{3}=\mathrm{Q}_{3}-\left(\mathrm{C}_{1}+\mathrm{C}_{2}\right)=74 \mathrm{kvar}, \mathrm{C}_{3}=100 \mathrm{kvar}$

- When $P_{4}$ is $1000 \mathrm{~kW}, Q_{4}=540 \mathrm{kvar}$

Capacitor $\mathrm{C}_{4}=\mathrm{Q}_{4}-\left(\mathrm{C}_{1}+\mathrm{C}_{2}+\mathrm{C}_{3}\right)=190 \mathrm{kvar}, \mathrm{C}_{4}=200 \mathrm{kvar}$

## Power Monitoring Equipment <br> General Information

## Power monitoring equipment (F-MPC) <br> F-MPC60B, F-MPC30, F-MPC04 series

## Description

- FUJI power monitoring equipment (F-MPC) realizes fine power management to contribute to energy-saving.
- We can offer you various F-MPC equipment such as FMPC04 series power monitoring unit that measures electric power of one to multi-circuits, and compact size F-MPC60B, F-MPC30 series multifunctional digital relay that protects, controls, and measures high-voltage distribution facilities.
- As support tool, a power monitoring system software, F-MPC-Net is also available, which collects and analyzes data measured by F-MPC.
- As related products of F-MPC, molded case circuit breaker with ZCT and split type current transformer are introduced.

- Power monitoring equipment used in power distribution system

## Multiple function protectors and controllers F-MPC60B, F-MPC30 series

## Description

- FUJI multiple function protector and controller (F-MPC) performs energy control to contribute to energy-saving. The F-MPC60B and F-MPC30 are a kind of multifunctional digital relays.
- Although these series are very compact, they integrate multiple functions in a compact body, such as protection, measurement, operation, and monitoring of high-voltage power distribution and switching facilities. They can also transmit data obtained from these functions to upper level controllers.

## ■ Functions

The functions of F-MPC60B and F-MPC30 series are listed below.

| Series |  | F-MPC60B | F-MPC30 |
| :---: | :---: | :---: | :---: |
| Type |  | UM43FG-E5AK | UM5ACG-H5R |
| Installation location |  | Receiving or feeder | Feeder |
| Application (phase: line) |  | 3:3, 3:4 | 3:3, 3:4 |
| VT voltage | Input | 2VT/3VT star | - |
|  | Voltage indication | Between phases, between lines | - |
| Ground fault system | System type | Direct/resistance | Direct/resistance |
| IO detection | ${ }^{1}$ Residual (3XCT) | $\bigcirc$ | $\bigcirc$ |
|  | (2)Tertiary winding (100/5A) | $\bigcirc$ | $\bigcirc$ |

## Multiple function protectors and controllers F-MPC60B series, UM43FG-E5AK

## Description

Although the F-MPC60B series is very compact, it integrates multiple functions in one body, such as protection, measurement, operation, and monitoring of high-voltage power distribution and switching facilities. It can also transmit the data obtained with these functions to upper level controllers.

## 1 Features

## Flexibility

In accordence with changes in circuit conditions such as CT ratio, the setting of the F-MPC60B can be easily changed.

## Improved maintainability

Preventive maintenance and fault analysis can be easily made with the functions that display operation history and fault data.

## High reliability

To prevent operation errors such as circuit disconnection, the FMPC60B series has dual CPUs that check with each other for confirmation and dual output circuits from which output signals are always checked.

## RS-485 communication interface

Two protocol types are available: MPC-Net protocol and MODBUS protocol.*

Note: * MODBUS protocol is available for version 1 or later.

## $\square$ Specifications

- General specifications

| Type |  | UM43FG-E5AK |
| :---: | :---: | :---: |
| Control power supply |  | 100V DC (80 to 143V)/ 100V AC (85 to 132V) common use |
| Control power consumption |  | Max. 15W |
| Power consumption of CT, VT |  | Max. 1.0VA |
| Rated current (CT secondary current) |  | 5A AC ( "1A AC" model is also available (non-standard).) |
| Rated voltage | Line voltage | Select "110V AC" or " $110 \times \sqrt{3} \mathrm{AC}$ " (VT secondary voltage) |
|  | Phase voltage | Select "110V $/ \sqrt{3} \mathrm{AC}$ " or "110V AC" (VT secondary voltage) |
| Zero-phase current |  | 5A AC |
| Insulation resistance |  | $10 \mathrm{M} \Omega$ (min.) between ground and electric circuits connected together |
| Vibration resistance |  | $16.7 \mathrm{~Hz} 1.96 \mathrm{~m} / \mathrm{s}^{2}, 0.4 \mathrm{~mm}$ double amplitude, 10 minutes each in $\mathrm{X}, \mathrm{Y}$, and Z directions |
| Shock resistance |  | $300 \mathrm{~m} / \mathrm{s}^{2}$, three times each in $\mathrm{X}, \mathrm{Y}$, and Z directions |
| Withstand voltage |  | 2 kV AC 1 minute between ground and electric circuits connected together, excluding, RS-485 signal, MN signal, and kWh-pulse output signal cables |
| Noise resistance |  | JEC2500 (conforming to ANSI), square wave, 1.5 kV , 1ns/1 $\mathrm{s}^{\text {, for }} 10$ minutes. |
| Overload resistance |  | CT circuit: at ratting 40times, a second, 2 times VT circuit: at ratting 1.25 times, 10 second |
| Lightning impulse noise resistance |  | 5.0 kV (between ground and electrical circuits connected together) |
| Dropout tolerance |  | 20 ms (Operation continues, however, display goes out.) |
| Electrostatic discharge |  | Contact discharge: $\pm 8 \mathrm{kV}$ Aerial discharge: $\pm 15 \mathrm{kV}$ |
| Ambient temperature |  | Operating: -10 to $+60^{\circ} \mathrm{C}$ (operation guaranteed) 0 to $+40^{\circ} \mathrm{C}$ (characteristics guaranteed) (no icing) *1 <br> Storage: -25 to $+70^{\circ} \mathrm{C}$ (no icing) |
| Humidity |  | 20 to 90\% RH (no condensation) |
| Atmosphere |  | No corrosive gas and no heavy dirt and dust. |
| Grounding |  | Class D grounding (100 2 or less) |
| Applicable standard |  | JEC2500 (Protective relays for electric power systems), JEC-2510 (Overcurrent relays), JEC-2511 (Voltage relays), JIS C4602 (Overcurrent relays for 6.6kV receiving), JIS C1102-1 to -9 (Direct acting analogue electrical instrument and their accessories), IEC255-3 (1989), -5, -6 |
| Mass |  | $1.4 \mathrm{~kg}$ |

Specifications

- Input/output specifications

| Input circuit |  | Applicable to both 100 V DC (max. 143V) and 100V AC (max. 132V) <br> Pick up voltage: 40 to 70 V DC/40 to 70 V AC |
| :--- | :--- | :--- |
| Output circuit | Circuit breaker ON/OFF/trip | Making current: $15 \mathrm{~A}(110 \mathrm{~V}$ DC), allowable continuous current: 4A |
|  | Other than above | Making/breaking current: $0.2 \mathrm{~A}(110 \mathrm{~V}$ DC, inductive load L/R $=15 \mathrm{~ms}$ or less), allowable <br> continuous current: 1 A |

- Measurement and display specifications

|  | Effective measuring and display range | Accuracy *2 |
| :---: | :---: | :---: |
| Current/Demand current/ Max. demand current | 0, $0.8 \%$ to CT rating to 8 - CT rating *1 | $\pm 1.5 \%$ (0, 0.8 to 100\%), $\pm 5 \%$ (100 to 800\%) |
| Zero-phase current/Max. zero-phase current | CT: 0, $2 \%$ to CT rating to 8 - CT rating | $\pm 1.5 \%$ : $0,2 \%$ to CT rating, $\pm 5 \%$ : others |
| Active power <br> Demmand active power/ Reactive power | $\pm 0.004$ to $\pm 1 \mathrm{~kW}$ at VT secondary circuit (The value is converted into the VT rated voltage | $\pm 1.5 \%: 0, \pm 0.004 \text { to } \pm 1 \mathrm{~kW}$ <br> See the figure below. |
| Power factor | Lead 0\%-100\% - Lag 0\% | $\pm 5 \%$ (Lagging: no sign, leading: - sign) See the figure below. |
| Active electric energy *3 Reactive electric energy | 0 to 99999, multiplying factor: 1, 10, 100,1000 | Equivalent to ordinary instruments shown in Table 4 specified in JIS C 1216 (instrument with a transformer) |
| Line voltage | 9.5 to 260 V on VT secondary side | $\pm 1.5 \%$ |
| Phase voltage | 5.5 to 150 V on VT secondary side | $\pm 1.5 \%$ |
| Frequency | 45 to $55 \mathrm{~Hz}(50 \mathrm{~Hz}), 55$ to $65 \mathrm{~Hz}(60 \mathrm{~Hz})$ | $\pm 0.5 \%$ |
| Max. demand value | Same as the above range | - |
| Harmonics current | 3rd, 5th, 7th, overall harmonics | - |

*1 The fault current up to $2000 \%$ (accuracy: $\pm 5 \%$ ) can be displayed.
*2 " 0 , a to n\%" means that " 0 " is indicated if a value is less than a\%.
${ }^{* 3}$ There are two indications in the electric energy indication; total electric energy indication (zero clear disable) and periodic electric energy indication (zero clear is enable).

## The sign " $\pm$ " in electric measuring

The sign " $\pm$ " is used to display "LEAD/LAG" in power-factor. measuring and "electric power selling/purchase" in electric power measuring. No signs are used if a value is " + ". The sign " $\pm$ " has the following meanings depending on the measured items.

- Active power: kW
+ : Power purchase (Consumed electric power)
-: Electric power selling (Inverse electric power flow)
- Reactive power: kvar
+ : Lagging current by reactive volt-ampere meter method
-: Leading current by reactive volt-ampere meter method
* "LEAD/LAG" reverses with electric power selling/purchase.
- Power factor: COS $\phi$
+:LAG -: LEAD

## ■ Specifications

- Specifications of transducer outputs

| Transducer output signal | 4 to $20 \mathrm{~mA} \mathrm{DC} \mathrm{(external} \mathrm{load} \mathrm{resistance:} 270 \Omega$ or less) |  |  |
| :--- | :--- | :--- | :--- |
| Signal type | Current (la, Ib, Ic) | 4 to 20 mA for 0 to CT rated current | Accuracy $\pm 1.5 \%$ |
|  | Line voltage (Vab, Vbc, Vca) | For VT secondary 0 to150V, 4 to $20 \mathrm{~mA} * 1$ |  |
|  |  |  |  |

Note: • Output signals are connected to a common terminal (minus side).

- An upper or lower limiter operates when the output signal is about to exceed the upper or lower limit.

The upper limit is fixed at 20 mA , and the lower limit is fixed at 20 mA .
${ }^{* 1}$ : Applied line voltage: $100 \mathrm{~V} / 110 \mathrm{~V} / 120 \mathrm{~V}$ AC.
*2: Applied line voltage: $100 \mathrm{~V} / 110 \mathrm{~V} / 120 \mathrm{~V}$ AC $\times \sqrt{ } 3$, $A C$.

- Specifications of kWh pulse output

| Type of output | Transistor, open collector |
| :--- | :--- |
| Ratings | Max. 150 V DC, 100 mA |
| Pulse width | $200 \pm 20 \mathrm{~ms}$ |
| Pulse rate | $10^{n} \mathrm{kWh}$ per pulse ( $\mathrm{n}=-2$ to 4) (integer), or 2000 pulses per kWh |

## ■ Type number nomenclature

# Power Monitoring Equipment <br> Multiple function protectors and controllers F-MPC60B 

## Example of etxternal wiring diagrams

Note: *1 Use selective input 1 to 8 and selective output 1 to 8 by selecting the function type by setup.
*2 Outputs of "ON, OFF, TRIP and equipment error" are used exclusively. Inputs of "52a: the answer back signal of CB ON" and "the monitoring of TC coil" are used exclusively.
${ }^{* 3}$ Equipment error output is a normally closed contact (normally excited, and if an error occurs, excitation terminates and contact opens). Therefore, a time delay of about 100 ms occurs before the contact opens, since the power has been on (in operation). Consider the use of a timer, if necessary, if you create an external sequence.
*4 If this unit, being provided with RS-485 communication function, is located at the termination of a communication line, connect terminals No. 3 and 5 . With this, the $100 \Omega$ terminating resistor is connected across the RS- 485 bus.
${ }^{* 5}$ Use twisted wires (cables) as the output cable of transducer.

- If you have to connect a heavy load exceeding relay's contact rating, be sure to use it in combination with FUJI's miniature power relay HH6 $\square$. See page 09/106 "Input/output specifications."

## Dimensions, mm

Minimum clearance from adjacent upper and lower devices or panel plate: 100 mm

- Characteristics of overcurrent relay (OCR)

The characteristics of overcurrent relays (OCR) are, in general, divided into the protective INST (50) (setting code 10, 11), the protective DT1 (setting code 12 to 14), protective DT2 (setting code 1c, 1d, 1E) and the protective OC 51 (setting code 15 to18). The characteristics of protective OC 51 consist of 5 kinds
of inverse characteristic curves, such as standard inverse (SI) characteristics, very inverse (VI) characteristics, long time inverse (LT) characteristics, extremely inverse (EI) characteristics and $\mathrm{I}^{2 t}$ characteristics). Combination of the protective INST (50), protective DT1, protective DT2 and OC 51 carries out coordinative protection.

Outline of characteristic of overcurrent relay

| Item | Operating current | Operating time |
| :--- | :--- | :--- |
| Protective INST (50) | 1 to 20 times of CT rated current 5A (0.2 times step) | Fixed (40ms or less) |
|  |  | 0 to $5 \mathrm{~s} \mathrm{(0.05s} \mathrm{step)}$ |
| Protective DT1 | 20 to $240 \%$ of CT rated current 5A | 0 to $10 \mathrm{~s}(0.1 \mathrm{~s}$ step) |
| Protective DT2 | Select from 5 characteristic curves. <br> Time magnification: 0.5 to 20 times (0.1 times step) |  |
| Protective OC (51) |  |  |

*1: The operating time of protective OC51 is saturated at about 150 ms .
The operating time will be saturated at 20 times of CT rated current when the setting exceeds $200 \%$.
For example, the operating time becomes $833 \%(=2000 \% /(240 \% \cdot 100))$ of the CT rated current in $240 \%$ setting.

# Power Monitoring Equipment <br> Multiple function protectors and controllers <br> F-MPC30 

## Multiple function protectors and controllers F-MPC30 series, UM5ACG-H5R

## - Description

The F-MPC30 series is a multiple function protectors and controllers in the power monitoring equipment, which integrates protective, measurement, and transfer functions for power feeder facilities. Versatile functions such as preventive maintenance and history data and abnormal value recording can be achieved with excellent economy and reliability. These works have been very complicated as you must have used individual power monitoring devices in combination.

## Features

## Economical system configuration

 Includes measurement and protective functions limited to the current ranges most frequently used, thus allowing the construction of economical systems.
## Improved operating reliability

Includes an automatic monitor function, an automatic diagnostic function supported by continuous monitoring and automatic inspection, and a fail-safe function, thus ensuring high operating reliability while minimizing daily and regular inspection tasks.

## Easily designed coordination protection

Provided with 51DT1 and 51DT2 definite time trip characteristics that simplify the designing of coordination protection between overcurrent relays.

## RS-485 communications interface

Two protocol types are available:
MPC-Net protocol and MODBUS protocol.

Specifications

- General specifications

| Type | UM5ACG-H5R |
| :---: | :---: |
| Control power supply | 100/200V DC (80 to 286V DC) 100V AC (85 to 132V) common use |
| Control power consumption | Max. 15W (100/200V DC), Max 25 VA (100V AC) |
| Power consumption of CT, VT | Max. 1.0VA |
| Rated current (CT secondary current) | 5A AC ("1A model" is also available (non-standard)) |
| Zero-phase current | 5A AC |
| Insulation resistance | $10 \mathrm{M} \Omega$ min. between ground and electric circuits connected together |
| Vibration resistance | $16.7 \mathrm{~Hz}, 0.4 \mathrm{~mm}$ double amplitude, $1.96 \mathrm{~m} / \mathrm{s}^{2}, 10$ minutes each in $X, Y$, and $Z$ directions |
| Shock resistance | $300 \mathrm{~m} / \mathrm{s}^{2}$, three times each in $X, Y$, and $Z$ directions |
| Withstand voltage | 2 kV AC 1 minute between ground and electric circuits connected together, excluding RS-485 signal lines |
| Noise resistance | JEC 2500 (conforming to ANSI), square wave, 1.5 kV , 1ns/1 $\propto$, for 10 minutes |
| Overload resistance | CT circuit: at rating 40 times, a second, 2 times |
| Lightning impulse noise resistance | 4.5 kV (between ground and electrical circuits connected together) |
| Dropout tolerance | 20 ms (Operation continues, however, display goes out.) |
| Electrostatic discharge | Contact discharge: $\pm 8 \mathrm{kV}$, Aerial discharge: $\pm 15 \mathrm{kV}$ |
| Ambient temperature | -10 to $+60^{\circ} \mathrm{C}$ (operation guaranteed), 0 to $+40^{\circ} \mathrm{C}$ (characteristic guaranteed) (no icing) *1 |
| Storage temperature | -25 to $+70^{\circ} \mathrm{C}$ (no icing) |
| Humidity | 20 to 90\%RH (no condensation) |
| Atmosphere | No corrosive gas and no heavy dirt and dust. |
| Grounding | Class D grounding (100 2 or less) |
| Applicable standard | JEC2500 (Protective relays for electric power systems), JEC-2510 (Overcurrent relays), JIS C4602 (Overcurrent relays for 6.6kV receiving), JIS C1102-1 to -9 (Direct acting analogue electrical instrument and their accessories), IEC255-3 (1989) -5, -6. |
| Mass | 1.4 kg |

[^10]
# Power Monitoring Equipment Multiple function protectors and controllers 

- Input/output specifications

| Input circuit |  | 100/200V DC (286V DC or less) common use Pick-up voltage: 40 to 70V DC (Input current; 1.2 mA at 100 V DC, 2.4 mA at 200 V DC) |
| :---: | :---: | :---: |
| Output circuit | Circuit trip | The closing current: 15A (110V DC), 10A (220V DC), the allowable continuous conduction current: 4A |
|  | Other than above | The switching current: 0.2 A (110V DC, inductive load $L / R=15 \mathrm{~ms}$ or less) The allowable continuous conduction current: 1A |
|  |  | The making current: 0.1 A (220V DC, inductive load $\mathrm{L} / \mathrm{R}=15 \mathrm{~ms}$ or less) The allowable continuous conduction current: 1A |

- Measurement and display specifications

|  | Effective measuring and display range | Accuracy *2 |
| :--- | :--- | :--- |
| Current | $0,0.8 \%$ to CT rating to 8 CT rating *1 | $\pm 1.5 \%(0,0.8$ to $100 \%), \pm 5 \%(100$ to $800 \%)$ |
| Zero-phase current | CT: 0, 2\% to CT rating to 8. CT rating | $\pm 1.5 \%(0,2 \%$ to CT rating), $\pm 5 \%$ (more than CT <br> rating) |

*1 The fault current up to $2000 \%$ (accuracy: $\pm 5 \%$ ) can be displayed.
*2 "0, a to $n \%$ " means that " 0 " is indicated if a value is less than $\mathrm{a} \%$.

## - History data and display ranges

| Item | Display range | Display code |
| :--- | :--- | :--- |
| 50 (INST) operation count | 0 to 9999 | H 0 |
| 51DT1 operation count | 0 to 9999 | H 1 |
| 51 (OC) operation count | 0 to 9999 | H 2 |
| 51G operation count | 0 to 9999 | H 3 |
| 50G operation count | 0 to 9999 | H 4 |

* Other history display: Fault value display (on occurrence of a fault), history maximum values of zero-phase current/voltage, maximum demand value (A, W), and minimum instantaneous voltage

| Item | Display range | Display code |
| :--- | :--- | :--- |
| OCA operation count | 0 to 9999 | Hb |
| Running time | 0 to $9999 \cdot 100(\mathrm{~h})$ | Hc |
| Close operation count | 0 to $9999 \cdot 10$ (times) | Hd |
| OCGA operation count | 0 to 9999 | Hn |
| 51DT2 operation count | 0 to 9999 | HP |

* The display codes are the codes to be displayed on this F-MPC30 (UM5ACGH5R).

## - Specifications of protective relays

|  | Setting range of current/voltage operatel value | Setting range of operate time (timer) | Characteristics (accuracy) |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | Operate value | Operate time |
| 50 (Instantaneous) | 1 to 20 times of CT rated current (in 0.2 times step), Lock | Fixed | $\pm 5 \%$ | 40 ms or less |
| 51DT1 (Definite-time) | 1 to 20 times of CT rated current (in 0.2 times step), Lock | 0 to 5s (in 0.05s step) | $\pm 5 \%$ | Less than $1 \mathrm{~s} \pm 50 \mathrm{~ms}$ More than $1 \mathrm{~s} \pm 5 \%$ |
| 51DT2 (Definite-time) | 20 to $240 \%$ of CT rated current (in 2\% step), Lock | 0 to 10s (in 0.1s step) | $\pm 5 \%$ | Less than $1 \mathrm{~s} \pm 50 \mathrm{~ms}$ More than $1 \mathrm{~s} \pm 5 \%$ |
| 51 (Inverse time) <br> SI, EI, VI, LT | 20 to $240 \%$ of CT rated current (in 2\% step), Lock | Time multiplication: <br> 0.5 to 20 times (in 0.1 times step) <br> (Min. operation time: 150ms) | $\pm 5 \%$ | Setting value $300 \%$ : $\pm 12 \%$ $500,1000 \%$ : $\pm 7 \%$ (lower limit $\pm 100 \mathrm{~ms}$ ) |
| 50G, 50N (Instant/definite time) | 0.1 to 8 times of CT rated current (in 0.1 times step), Lock | 0.0 to 10s to 180 s <br> (in 0.1 s step.) (in 1s step.) *1 *2 | $\pm 5 \%$ | $\pm 5 \%$ (lower limit $\pm 50 \mathrm{~ms}$ ) |
| $\begin{aligned} & 51 \mathrm{G}, 51 \mathrm{~N} \\ & \mathrm{SI}, \mathrm{EI}, \mathrm{VI}, \mathrm{LT} \end{aligned}$ | 0.02 to 1.00 times of CT rated current (in 0.01 times step), Lock | Time multiplication: <br> 0.5 to 20 times (in 0.1 times step) <br> (Min. operation time: 150ms)*1 | $\begin{aligned} & \pm 5 \% \\ & (\mathrm{~min} . \pm 100 \mathrm{~mA}) \end{aligned}$ | Setting value $300 \%$ : $\pm 12 \%$ 500, 1000\%: $\pm 7 \%$ (lower limit $\pm 100 \mathrm{~ms}$ ) |
| OCA <br> (Overcurrent pre-alarm) | 10 to $100 \%$ of CT rated current (in $5 \%$ step), Lock | 10 to 200s (in 10s step) | $\begin{aligned} & \pm 10 \% \\ & (\min . \pm 100 \mathrm{~mA}) \end{aligned}$ | $\pm 5 \%$ |
| OCGA <br> (Leakage current pre-alarm) | $50,60,70,80 \%$ of the setting value of "51G operating current", Lock | 10 to 200s (in 10s step) | $\begin{aligned} & \pm 10 \% \\ & (\min . \pm 200 \mathrm{~mA}) \end{aligned}$ | $\pm 5 \%$ |

Notes: *1 When a current exceeds $15 \%$ of the rated fundamental wave current, the malfunction preventive function against the exciting inrush current activates. (When the contents of the second higher harmonics are about $15 \%$ or higher, the feature will lock outputs.) Note that with the 50 G relay, the malfunction preventive function against the exciting inrush current will not activate if you set the operate time at 0s.

# Power Monitoring Equipment <br> Power monitoring unit <br> F-MPC04, F-MPC04P, F-MPC04S 

## Power monitoring unit F-MPC04 series

## Description

- F-MPC04 series power monitoring equipment, designed for used in low voltage circuits, can perform electric power management and monitoring from high to low voltage circuit efficiently and economically, used together with F-MPC60B and F-MPC30 series.
- F-MPC04 series consists of 3 types: type UM04 integrated power monitoring unit that can monitors up to 10 feeders, type UM02 multi-circuit power monitoring unit that is space-saving and can monitor up to 8 feeders in three-phase three-wire system, and type UM03 single circuit power monitoring unit, being compact, that has optimum output functions for preventive maintenance, and is best suited for installation in a unit of facility, section, and floor.
- RS-485 communications interface is standard. With our application software of F-MPC-Net power monitoring system, you can automatically display, print, and save the data measured by F-MPC 04 on your PC.

[^12]■ System configuration example
Low voltage

## Power Monitoring Equipment <br> Power monitoring unit <br> F-MPC04

## Integrated power monitoring unit, UM04

## Description

Integrating complete functions required for power distribution and power line data management in a single unit (up to 10 circuits for 3-phase 3-wire system)

- Supports multiple power distribution lines UM04 allows economical management of each facility and installation by means of communications interface.
- Easy mounting to existing switchboards

Split-through type CTs enables UM04 s easy mounting to existing boards.

- Flexible energy management

UM04 manages power line data such as measurement, preventive maintenance, maintenance and electricity quality, and transmit those data to upper level controller, thus promises energy and labor-saving.

- Harmonics current measurement

The third, fifth, seventh, and total harmonic current can be measured.

- Monitor insulation deterioration and implement preventive maintenance by measuring leakage current.
Provides deterioration trend analysis with trend data and preventive maintenance with 2-stage output (leakage current pre-alarm and leakage current relays).
- Compatible with MODBUS RTU protocol. Select between the MODBUSRTU protocol or the F-MPC-Net protocol for the F-MPC series.

UM04-ARA4

CT-BOX

- Handles digital input.

Four inputs (ON/OFF status and pulse count digital signals) from the relay connector terminal block.

- Related Equipment

Molded case circuit breakers with ZCT and split type current transformers are also introduced as related products, RS16 Terminal Relay which outputs leakage current prealarm and the connector terminal-block which outputs kWh pulse, are also explained (UM04 use only).

Type number nomenclature
Integrated power monitoring unit

## UM04-ARA4

Types

| Description | Specification | Type | Remarks |
| :--- | :--- | :--- | :--- |
| Integrated power monitoring unit | RS-485, 2VT-conformed | UM04-ARA4 |  |
| CT-BOX | For CT secondary current 5A | UM04X-5 |  |
|  | For CT secondary current 1A | UM04X-1 |  |
| Related product | 15 output | RS16-DE04H | See page 09/137. |
| Terminal Relay | Length 1m/2m/3m | AUX014-20 $\square$ | See page 09/137. |
| Connector cable | kWh pulse output <br> For digital input | AU-CW21B1-04 | See page 09/138. |
| Connector terminal block |  |  |  |

## ■ Applicable CT

| Current transformer (CT) | CT secondary current | Applicable CT-BOX | Applicable integrated power monitoring unit |
| :--- | :--- | :--- | :--- |
| Split CT Type CC2C76- $\square \square \square 1$ <br> Type CC2D74- $\square \square \square 1$ | 1A | UM04X-1 | UM04-ARA4 |
| General-purpose CT XX/1A | 1A |  |  |
| General-purpose CT XX/5A | 5 A | UM04X-5 |  |

| Applicable circuit | CT-BOX |  |
| :--- | :--- | :--- |
|  | One unit | Two units |
| Three-phase/3-wire | feeders max. | 10 feeders max. |
| Single-phase/2-wire |  |  |
| Single-phase/3-wire |  | 6 feeders max. |
| Three-phase/4-wire | 3 feeders max. |  |

* The number of countable feeders depends on the number of CT boxes.

## ■ Specifications

## - General specifications

| Item |  | Specification |
| :---: | :---: | :---: |
| Rating | Rated frequency | 50 or 60 Hz (Selectable by the setting) |
|  | Rated voltage | Applicable to both 110 V and 220V AC, 110V AC for use with a VT secondary circuit |
|  | Rated current | Depends on CT-BOX specifications (5A, 1A in a CT secondary circuit, power consumption: 0.1VA max., excluding power loss in the external cable resistance) |
|  | Zero-phase CT | EW type or MCCB with a ZCT (zero-phase current transformer ) type (FUJI model) |
| Control power supply |  | 85 to 264V AC (By exclusive control power supply terminal) |
| Inrush current |  | 40A max., 3ms max. (AC) 85A max., 3ms max. (DC) |
| Control power consumption *1 |  | 25VA max. (Power monitoring unit + two CT-BOXes + Terminal Relays with all contacts ON) |
| Rated input | Voltage input (VT ratio) | 100 V direct input,200V direct input <br> VT primary/secondary : AC220/110V, AC440/110V, AC440/220V, AC240/110V, AC400/110V, AC3.3k/110V, AC6.6k/110V |
|  | Current input (CT ratio) | Primary rating setting : 10A, 15A, 20A, 25A, 30A, 40A, $50 \mathrm{~A}, 60 \mathrm{~A}, 75 \mathrm{~A}, 80 \mathrm{~A}, 100 \mathrm{~A}, 120 \mathrm{~A}, 150 \mathrm{~A}, 160 \mathrm{~A}, 200 \mathrm{~A}, 250 \mathrm{~A}, 300 \mathrm{~A}, 320 \mathrm{~A}, 400 \mathrm{~A}, 500 \mathrm{~A}, 600 \mathrm{~A}$ $630 \mathrm{~A}, 750 \mathrm{~A}, 800 \mathrm{~A}, 100 \mathrm{~A}, 1200 \mathrm{~A}, 1250 \mathrm{~A}, 1500 \mathrm{~A}, 1600 \mathrm{~A}, 2000 \mathrm{~A}, 2500 \mathrm{~A}, 3000 \mathrm{~A}, 3150 \mathrm{~A}, 3200 \mathrm{~A}, 4000 \mathrm{~A}, 5000 \mathrm{~A}, 6000 \mathrm{~A}, 7500 \mathrm{~A}$ |
| Ambient temperature |  | -10 to $+55^{\circ} \mathrm{C}$ (no icing or no condensation) |
| Storage temperature |  | -20 to $+70^{\circ} \mathrm{C}$ (no icing or no condensation) |
| Humidity |  | 20 to 90\% RH (no condensation) |
| Atmosphere |  | No corrosive gas and no heavy dirt and dust |
| Alarm and shutdown outputs |  | Continuous output current: 1A max. (with output of terminal relay, RS16-DE04H) Make and break current: 250V AC 5A, 30V DC 5A max. |
| Insulation resistance |  | $10 \mathrm{M} \Omega$ min.: between ground and electric circuits connected together $5 \mathrm{M} \Omega$ min.: between electric circuits, between contacts |
| Dielectric strength |  | 2000 V AC, 1 minute between ground and electric circuits connected together, excluding T-link and RS-485 signal circuits |
| Impulse |  | $4.5 \mathrm{kV}(1.2 \cdot 50 \propto \mathrm{~s})$ between ground and electric circuits connected together, excluding T-link and RS-485 signal circuits |
| Momentary overload capability |  | 20 times rated current, nine times for 0.5 s , once for 2 s |
| Shock resistance |  | Approx. $300 \mathrm{~m} / \mathrm{s}^{2}$, three times in each of $\mathrm{X}, \mathrm{Y}$, and Z axes |
| Noise immunity |  | 1 to 1.5 MHz damped oscillation noise having 2.5 to 3 kV peak voltage for 2 s 1.5 kV square wave (rise time: 1 ns , pulse width: $1 \propto \mathrm{~s}$ ) for 10 minutes continuously |
| Vibration resistance |  | JIS C $60068-2-6 \quad 10-58 \mathrm{~Hz}$ : single amplitude $0.075 \mathrm{~mm} .58-150 \mathrm{~Hz}=$ constant accelation $10 \mathrm{~m} / \mathrm{s}^{2} \mathrm{X}, \mathrm{Y}, \mathrm{Z}$ directions 8minutes X10 cycles |
| Electrostatic noise resistance |  | Mounting steel panel surface: $\pm 8 \mathrm{kV}$ <br> F-MPC04 (UM04) front panel surface: $\pm 15 \mathrm{kV}$ |
| Permissible momentary power failure |  | 20 ms , continuous operation (excluding display) |
| Mass |  | Power monitoring unit UM01: 1000g, CT-BOX: 300g Terminal relay: 200 g |

Note *1 The control power consumption on the table applies to where CT-BOXes and Terminal relays are connected to the power monitoring unit UM04.

# Power Monitoring Equipment Power monitoring unit F-MPC04 

## - Measurement and display specifications

| Measurement type | Effective measuring range | The main body display | Communication data | Accuracy (\%) | Remarks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Current: $I(r), I(s), I(t)$ | $0,0.5 \%$ to $150 \%$ of CT secondary rated current | 4 digits | 4 digits | $\pm 2.5 \%$ FS | " 0.00 " is displayed, if the measured value is about $1.0 \%$ or less. |
| Voltage: *3 V(uv), V(vw), V(wu) | VT secondary voltage: <br> 3Ø3W : max 264V <br> 3Ø4W (Phase voltage): <br> max.264V <br> 3Ø4W (Line voltage): $\sqrt{3 \times 264 V}$ |  |  | $\pm 2.5 \%$ FS | VT secondary voltade is jointly used as internal control power supply. (For U-V) |
| Zero-phase current lo | 0, 50 to 3600 mA |  |  | $\pm 20 \%$ FS | " 0 " is displayed, if the measured value is about 50 mA or less. |
| Active power *4*5 | 0 to 3.5 kW (220V) as converted to current transformer secondary value | 4 digits with the code | 4 digits with the code | $\pm 2.5 \%$ FS | Two-wattmeter method: Measured when the value is $0.4 \%$ or higher of the rated current. (lr, It, Vuv, Vvw) |
| Reactive power *4*5 | 0 to 3.5 kvar (220V) as converted to current transformer secondary value |  |  | $\pm 2.5 \%$ FS | Two-wattmeter method |
| Power factor *4 | Lead : 0\%-100\%-Lag : 0\% | 3 digits with the code | 4 digits with the code | $\pm 5 \%$ <br> The " $90^{\circ}$ " phase angle conversion |  |
| Active electric power | 0 to 99999 (kWh) The effective power quantity of the plus 0 to 99999 (kWh) The effective power quantity of the minus | 5 digits | *6 | Equivalent to ordinary class specified in JIS | $\pm 2.0 \%$ (Power factor of 1 between $5 \%$ and $120 \%$ of CT primary rated current) $\pm 2.5 \%$ (Power factor of 0.5 between $10 \%$ and $120 \%$ of CT primary rated current) |
| The reactive energy | 0 to 9999 (kvar) <br> The reactive energy of the plus 0 to 9999 (kvar) <br> The reactive energy of the minus | none | *6 | $\begin{array}{\|l\|} \hline \pm 0.5 \% \\ \text { (No display) } \end{array}$ |  |
| The voltage minimum value | "264V from 85V" in VT secondary of each phase | 4 digits |  | $\pm 2.5 \%$ FS |  |
| The voltage maximum value | "264V from 85V" in VT secondary of maximun-phase |  |  | $\pm 2.5 \%$ FS |  |
| Harmonic current | 3rd \& 5th order : 0, 2.5\% to 150\% 7th order : 0, $5.0 \%$ to $150 \%$ |  |  | $\begin{aligned} & \pm 2.5 \% \\ & \text { (7th order: } \pm 5 \% \text { ) } \end{aligned}$ | *7 |

Note : *1. The measurement accuracy includes the error in the CT boxes and ZCT. The error in the combined VTs and CTs are not included.
*2. Current, voltage, and power performance characteristics are according to JIS C 1102 (indicating electrical measuring instruments). The measurement display value is the average value over approximately 1 second.
*3. The values in the table are the line voltages for 3-phase, 3 -wire systems and the phase voltages for 3 -phase, 4 -wire systems. For 3 -phase, 4 -wire applications, the setting in this table can be used to display either the phase voltages or line voltages.
*4. Selling/purchasing for power measurement and lead/lag for power factor measurements are displayed with one sign (blank for positive). The meaning of positive/negative for each measurement item is given below.
*5. The maximum values of the active power and reactive power are $\pm 3.5 \mathrm{~kW}$ at a 5 A secondary current for 3 -phase, 3 -wire systems, $\pm 0.69 \mathrm{~kW}$ at 1 A for 3 -phase, 3 -wire systems, $\pm 6.0 \mathrm{~kW}$ at a 5 A secondary current for 3 -phase, 4 -wire systems, and $\pm 1.2 \mathrm{~kW}$ at a 1 A secondary current for 3 -phase, 4 -wire systems.
*6. For the F-MPC-Net protocol, the lower four digits of the display are sent. For the MODBUS RTU protocol, 0 to 999999.999 kWh is sent and the step value for the total countup depends on the VT ratio and CT ratio.
*7. For 3-phase, 3-wire systems, the harmonic currents for phases R and T are measured. For 3-phase, 4-wire systems, the harmonic currents for phases R, S, and $T$ are measured.

## The sign " $\pm$ " in electric measuring

The sign " $\pm$ " is used to display "LEAD/LAG" in power-factor, measuring and "electric power selling/ purchase" in electric power measuring. No signs are used if a value is " + ". The sign " $\pm$ " has the following meanings depending on the measured items.

- Active power: kW
+ : Power purchase (Consumed electric power)
-: Electric power selling (Inverse electric power flow)
- Reactive power: kvar
+: Lagging current by reactive volt-ampere meter method
-: Leading current by reactive volt-ampere meter method
* "LEAD/LAG" reverses with electric power selling/purchase.
- Power factor: COS $\phi$
+:LEAD -: LAG

# Power Monitoring Equipment <br> Power monitoring unit 

## - Demand measurement

| Item | Specification |
| :--- | :--- |
| Current $\mathrm{I}(\mathrm{r}), \mathrm{I}(\mathrm{s}), \mathrm{I}(\mathrm{t})$ ) | Time: Select one from 0,1 to 15 minutes (1 minute increments) and 30 minutes it at the initial setting |
| (common to all 10 circuits). |  |
| Effective power |  |
| Harmonics currents, voltage | Display item: 1. Demand values <br> 2. Maximum demands (maximum values recorded before the last reset operation) |

## - Specifications of a leakage current relay

## Sensitive current

| Setting value | $200 / 500 / 1000 / 2000 / 3000 \mathrm{~mA}$ or Lock <br> (lo or lob selectable) |
| :--- | :--- |
| Operating Level | 50 to $100 \%$ of setting value <br> (Operate at less than $50 \%$, no opearate at $100 \%$ ) |

Operation time characteristics

| Setting time | Inertia non-operating time | Operating time |
| :--- | :--- | :--- |
| 0.1 s | - | 100 ms max. |
| 0.3 s | 150 ms min. | 0.3 s max. |
| 0.5 s | 250 ms min. | 0.5 s max. |
| 1.0 s | 500 ms min. | 1.0 s max. |
| 3.0 s | $1,500 \mathrm{~ms}$ min. | 3.0 s max. |

Note: - Sensitive current and operation time can be set by an arbitrary combination.

- The values on the table is for a trip relay's specifications. The pre-alarm relay operates at half the operating level on the table, and its operation time is 10 s fixed. The pre-alarm relay can be used as an alarm against leakage current increase in case of cable insulation deterioration or flood.
- Data display at fault occurrence

Pre-alarm of load current, pre-alarm of leakage current relay (auto-reset), maximum current indication at circuit interruption (indication reset by resetting)

- kWh-pulse-output specifications (for products with a kWh-pulse-output feature)
Transistor open collector output: 35V DC, 50mA max., (residual voltage at ON state: 2.5 V max.)
Output pulse width: $200 \mathrm{~ms} \pm 20 \mathrm{~ms}$
Output period: $1,000 \mathrm{~ms}$ min.
Output pulse rate: $10^{\mathrm{n}} \mathrm{kWh} /$ pulse, $\mathrm{n}=-2,-1,0,1,2$, or 3 (selected from VT and CT ratio.)

## - ZCT with Leakage Current Relay

The UM04 can be used together with a MCCB with ZCT or a zero-phase current transformer.

## Communications specifications

| Item |  | Specifications |  |
| :---: | :---: | :---: | :---: |
|  |  | F-MPC-Net protocol * | MODBUS RTU protocol * |
| Standard |  | EIA-485 |  |
| Transmission method |  | Half duplex, 2-wire |  |
| Data exchange method |  | 1:N (UM04) polling/selecting |  |
| Transmission distance |  | 1,000m (total length) |  |
| Number of stations |  | 31 max. per system (excluding master) |  |
| Transmission speed |  | 4,800/9,600/19,200bps (selectable) |  |
| Address setting |  | 1 to 99 |  |
| RS-485 terminal names |  | DXA, DXB | Connect DXA as D1(+) and DXB as D0(-). |
| Transmitted characters |  | ASCII | Binary |
| Data format | Start bits | 1 bit (fixed) | 1 bit (fixed) |
|  | Data length | 7 or 8 bits (selectable) | 8 bit (fixed) |
|  | Parity bit | None, even, or odd (selectable) | None, even, or odd (selectable) |
|  | Stop bits | 1 bit (fixed) | No parity: 2 bits (fixed) Others: 1 bit (fixed) |
|  | BCC | Even vertical parity | CRC-16 |

*The F-MPC-Net or MODBUS RTU protocol can be set for communications for the UM04.

## - Digital input specifications

| Item | Specification | Remarks |
| :--- | :--- | :--- |

Fuji Electric FA Components \& Systems Co., Ltd./D \& C Catalog

## Multi-circuit power monitoring unit, UM02

## Description

Integrating measuring functions required for power monitoring in one unit

- A single unit measures multiple circuits

A single UM02 can measure up to 8 feeders in 3-phase 3-wire,
12 feeders in single-phase 2 -wires and up to 4 feeders in 3-
phase 4 -wire circuit.

- Easy installation into existing switchboards Compact UM02 can be easily installed into on-site power distribution or lighting panel, irrespective of new panel or existing panel, to create power monitoring system economically.
- On-site measuring instrument

UM02 can be used an on-site measuring instrument by combining with an optional display and setting unit UM02X-S.

- Communication interface

As UM02 has an RS-485 communications interface as standard, it can communicate with other power monitoring equipment with RS-485

## Type number nomenclature

Multi-circuit power monitoring unit (Measuring unit)

- Type and applicable circuit

| Description | Applicable circuit | Type |
| :--- | :--- | :--- |
| Measuring unit | Single-phase 2-wire, up to 12 feeders | UM02-AR2 |
|  | 3-phase 3-wire, Single-phase 3-wire, Single-phase <br> 2-wire,up to 8 feeders | UM02-AR3 |
|  | 3-phase 4-wire, up to 4 feeders | UM02-AR4 |
| Sold separately | The TP48X socket and connecting cable are provided as accessories. | UM02X-S |
|  | 0.5 m | UM02X-C005 |
|  | 5 m | UM02X-C050 |

## - Specifications F-MPC04P (UM02)

- General specifications

| Item |  | Specification |
| :---: | :---: | :---: |
| Ratings | Voltage | Direct input: 100 or $200 \mathrm{~V} \mathrm{AC}, 400 \mathrm{~V}$ AC (AR4 only) <br> VT primary/ secondary: 220, 440V AC, 3.3k, 6.6kV AC/110V AC, 440/220V AC *1 |
|  | Current | Split CT: 5, 50, 200, 400A AC <br> Small split current sensor CT: 5A AC (primary rated set range 10 to 7500A) *1 |
| Control power supply |  | 100/200V AC common use ( 85 to 264V AC) <br> AR2: between terminals P1-N, AR3: between terminals U-V, AR4: between terminals P1-P2 |
| Inrush current |  | 15A max., 3ms max. (100V AC 50Hz) <br> 30A max., 3ms max. (200V AC 50Hz) |
| Control power consumption |  | 20VA or less (or approx. 15VA at 200V AC, 10VA at 100V AC) |
| Ambient temperature |  | Operating: -10 to $55^{\circ} \mathrm{C}$ (no icing or no condensation) Storage: -20 to $70^{\circ} \mathrm{C}$ (no icing or no condensation) |
| Humidity |  | 20 to 90\% RH (no condensation) |
| Atmosphere |  | Free from corrosive gases and excessive dusts or particles |
| Insulation resistance |  | $10 \mathrm{M} \Omega \mathrm{min}$. between electric circuits and ground |
| Dielectric strength |  | 2000V AC, 1 minute (2500V AC, 1 minute for AR4) between control power circuits and ground |
| Lightning impulse noise resistance |  | $4.5 \mathrm{kV}(1.2 \cdot 50 \propto \mathrm{~s})$ between control power circuits and ground (6.0kV for AR4) |
| Momentary overload capability |  | 20 times rated current, 9 times for 0.5s. |
| Vibration resistance |  | JIS C 60068-2-6 10 to 58 Hz : single amplitude of 0.075 mm , 58 to 150 Hz , constant acceleration of $10 \mathrm{~m} / \mathrm{s}^{2} 8$ minutes $\times 10$ cycles in each of $X, Y$, and $Z$ directions |
| Shock resistance |  | JIS C 60068-2-27 Half sine wave 300m/s ${ }^{2}$, for $11 \mathrm{~ms} \times 3$ times in each of $X, Y$, and $Z$ directions |
| Noise immunity |  | 1.5 kV square wave (rise time: 1 ns , pulse width: $1 \propto \mathrm{~s}$ ) for 10 minutes continuously |
| Permissible momentary power failure |  | 20 ms (continuous operation) except RS-485 communications |
| Mass |  | Measuring unit: Approx. 500g, Display and setting unit: Approx. 200g |

Note *1 Make VT and CT ratio settings through the display and seting unit UM02X-S or from the host controller.

## - Measurement specifications

| Item | Effective measurement range |  | Display | Accuracy *1 |
| :---: | :---: | :---: | :---: | :---: |
| Current (N-phase current measured in AR4) | With split CT (200A and 400A AC) combined $0,0.4 \%$ of $\operatorname{In}$ to 500A With small split current sensor (50A AC) combined $0,0.4 \%$ of In to 50A with small split current sensor (5A) combined *4 0 to n times CT rating |  | 4 digits | $\pm 1.5 \%$ |
| Active power |  |  |  | $\pm 2.5 \%$ for S-phase current of AR3 and N-phase current of AR4 |
| Reactive power *2 |  |  |  |  |
| Power-factor |  |  | $\square . \square \square$ | $\pm 5 \%$ (converted into a phase angle of $90^{\circ}$ ) |
| Active electric energy *2 |  |  | 5 digits | Equivalent to JIS ordinary class *4 |
| Max. active power *3 | Same as above. <br> (with a demand time set to $0,1,5,10,15$, or 30 min .) |  | 4 digits | $\pm 1.5 \%$ |
| Min. voltage each phase *2 | AR2, R3 85 to 264V (directly or VT secondary voltage conversion) The minimum and maximum voltage are average values for 0.3 s . | AR4 <br> Phase voltage 50 to 288V (directly or VT secondary voltage conversion) Line voltage 86 to 498 V The minimum and maximum voltage are average values for 0.3s. | 4 digits | $\pm 1.5 \%$ |
| Max. voltage *2 |  |  |  | $\pm 1.5 \%$ |

Notes *1 Measurement accuracy does not include CT and current sensor.
*2 In measurement mode display is the number of digits of RS-485 communications data. The display and setting unit does not display communications data on reactive power, minimum voltage, and maximum voltage values.
*3 Max active power and active electric energy values can be reset by the display and setting unit and host controller. And, when VT ratio or CT ratio is changed, these are autamalically reset.
*4 With 1 -turn or 3 -turn primary winding selected for the 5 A small split current sensor, the lower limit of minute current measurement is selected as specified below.

| Classfication | Measurement and display range | Measurement lower limit | Accuracy |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | (Electric energy starting current) | Current and power | Electric energy |
| 1 turn | 0, 2\% to rating • 10 | 2\% of rating | 0 to rating: $\pm 1.5 \%$ of rating | $\pm 2.5 \%$ <br> (5\% to 100\% of rating, load |
| 3 turns | 0, $0.7 \%$ to rating - 3 | 0.7\% of rating | Exceeding rating: $\pm 1.5 \%$ (FS) | power factor -0.8 to 1.0 to $+0.8)$ |

Note: * Sampling interval/measurement display value (communication) of current and power, and sampling and integration intervals of electric energy are shown below. In the case of an intermittent load, such as a welding machine, accurate measurement may be disturbed and therefore the use of the single-circuit F-MPC04S (refer to page 118) is recommended.

Fuji Electric FA Components \& Systems Co., Ltd./D \& C Catalog

## - Sampling interval and display value

| Type | Sampling interval/display value of current and power (Communication) | Sampling and cumlative interval of power |
| :--- | :--- | :--- |
| UM02-AR2 | Approx. 0.2s / Average voltage for aprox. 1.5 s | Approx. 0.2 s |
| UM02-AR3 | Approx. $0.2 \mathrm{~s} /$ Average voltage for aprox. 1.5 s | Approx. 0.2 s |
| UM02-AR4 | Approx. $0.1 \mathrm{~s} /$ Average voltage for aprox. 0.4 s | Approx. 0.1 s |

- Display and setting unit UMO2X-S, specifications

| Item | Specification | Remarks |
| :--- | :--- | :--- |
| Control power supply | Supplied from the measuring unit UM02-AR |  |
| Measuring unit UM02-AR communications <br> specifications | EIA-485 (always 19200bps fixed) |  |
| Number of connectable measuring unit <br> UM02-AR | 5 max. | UM02-AR2, AR3, AR4 |
| Max. cable length between UM02-AR and <br> UM02X-S | $23 m$ | Total length between UM02X-S <br> and all UM02-ARs |
| Display item | Operating status, measurement value <br> VT, CT setting value, fault | Selective indication by a switch |
| Setting | Voltage, current (CT), demand time, pulse <br> multiplication rate, No. of turns of CT secondary <br> winding, host controller communications mode <br> (different communications interface) | UM02-AR incorporates a different RS-485 <br> interface to communicate with a host controller. |

Note: The display and setting unit UM02X-S provides a function to start initial communications to recognize the UM02-AR automatically when UM02X-S is turned on. If on-site indication is not necessary once the setting to the measuring unit UM02-AR is complete, UM02-AR fully operates even without UM02X-S.

## - Communications specifications

| Item | Specification |
| :--- | :--- |
| Standard | EIA-485 |
| Transmission system | 2-wire half duplex |
| Data exchange | $1:$ N (F-MPC04P, UM02-AR) polling/selecting |
| Transmission distance | 1000 m (total length) |
| No. of connectable units | Max.32 (including master) |
| Station number setting | 01 to 99 (set with digital switch) |
| Transmission characters |  |
| Transmission speed | ASCII |
| Data format | Number of start bits |
|  | Data length |
|  | Parity bit |
|  | 1 (fixed) |
|  | 7 or 8 bits (selectable) |

[^13]Power Monitoring Equipment
Power monitoring unit F-MPC04P

Dimensions, mm

- Measuring unit UM02-AR

- Display and setting unit UM02X-S

## ■ System configuration

Note: * The display and setting unit UM02X-S is a local area communications master and can monitor and be able to set maximum five measuring units, UM02-ARs
** Station address setting of measuring unit UM02-AR
Use a digital switch on the measuring unit to set a different station address (communication address to host controller).
In local area communication of the display and setting unit UM02X-S, the UM02X-S will automatically read out the address of the measuring units connected with cables for unit connection, and communicate with hem.

## Single circuit power monitoring unit, UM03

## Description

Integrating measuring functions required for power monitoring in one unit

- Output functions for preventive maintenance selectable
- Power alarm/current prealarm
- kWh pulse output
- Leakage current alarm, leakage current prealarm output (model with leakage current measuring function) only
- Capable of measuring inrush current of welders
- High-speed sampling and calculation of voltage and current
- Compact design allows installation almost anywhere.
- Space-saving construction simplifies installation.
- Suited for monitoring individual equipment, section, and floor

## - Networking capability

- RS-485 interface.
- Can be connected to power distribution system same way as the power monitoring equipment F-MPC 60B, 30, 04 (UM04, UMO2) series products

## - Type numbers

| Single circuit power monitoring unit | Type |  |
| :--- | :--- | :--- |
| Leakage current measuring <br> function | Not provided | UM03-ARA3 |
|  | Provided | UM03-ARA3G |

Note : As CTs, use type numbers CC2D81-0057, CC2D81-0506, CC2D65-2008, CC2D54-4009, CC2B65-2008, and CC2B54-4009. Refer to page 134. General-purpose CTs (secondary rated current 5A or 1A) cannot be connected directly. Use the general-purpose CT (5A) together with type number CC2D81-0057. Use dedicated ZCT as combination ZCT with the UM03-ARA3.

- System configuration

## - Specifications

- General specifications

| Applicable circuit |  | Single circuit 3-phase 3-wire: 2-CT, single-phase 3-wire: 2-CT, single-phase 2-wire: 1-CT |
| :---: | :---: | :---: |
| Control power supply |  | 100 to 200 V AC (85 to 264 V AC) $50 / 60 \mathrm{~Hz}$ ( 45 to 66 Hz ) |
| Inrush current |  | $15 \mathrm{~A}, 3 \mathrm{~ms}$ or less (at $110 \mathrm{~V} \mathrm{AC}, 50 \mathrm{~Hz}$ ) $30 \mathrm{~A}, 3 \mathrm{~ms}$ or less (at $220 \mathrm{~V} \mathrm{AC}, 50 \mathrm{~Hz}$ ) |
| Control power consumption |  | Approx. 7VA (at 220V AC) Approx. 5VA (at 110V AC) |
| VT consumed burden |  | Approx. 0.2VA |
| Continuous overload capability | Current input circuit | 110\% of maximum setting value (150\% of rated current), 2 hours |
|  | Voltage input circuit | 291V AC (1.1. 264 V AC), 2 hours |
| Short-time overload capability | Current input circuit | 2000\% of max. setting value (150\% of rated current), 9 times for 0.5s |
|  | Voltage input circuit | $200 \%$ of max. setting value (264V AC), 9 times for 0.5 s |
| Vibration |  | 10 to 58 Hz 0.075 mm (one-way amplitude) <br> 58 to 150 Hz : constant acceleration $10 \mathrm{~m} / \mathrm{s}^{2}, 10$ cycles for 8 min in each $X, Y$, and $Z$ directions |
| Shock |  | $300 \mathrm{~m} / \mathrm{s}^{2}$, in each $\mathrm{X}, \mathrm{Y}$, and Z directions, 2 times |
| Withstand voltage / Insulation resistance (500V DC megger) |  | $2 \mathrm{kV} / 10 \mathrm{M} \Omega$ Between power supply terminals connected together and other terminals connected together $2 \mathrm{kV} / 10 \mathrm{M} \Omega$ Between measurement input terminals connected together and other terminals connected together $2 \mathrm{kV} / 10 \mathrm{M} \Omega$ Between alarm output terminals connected together and other terminals connected together $500 \mathrm{~V} / 10 \mathrm{M} \Omega$ Between watthour pulse output terminals connected together and other terminals connected together |
| Ambient temperature |  | -10 to $+55^{\circ} \mathrm{C}$ |
| Storage temperature |  | -20 to $+70^{\circ} \mathrm{C}$ |
| Humidity |  | 20 to 90\%RH (no condensation) |
| Atmosphere |  | Free from corrosive gases and excessive of dusts |
| Grounding |  | Type D ground (100 $\Omega$ or less) |
| Allowable momentary power failure time |  | 20 ms (operation will continue) |
| Altitude |  | 2,000m or less |
| Mass |  | Approx. 400g (main unit only, CT excluded) |

# Power Monitoring Equipment <br> Power monitoring unit <br> F-MPC04S (UM03) 

## - Measurement specifications

| Item | Effective measurement range | Display | Accuracy *1 |
| :---: | :---: | :---: | :---: |
| Current (R/S/T), demand current Max. demand current value | - With CT (200A AC) <br> $0,0.4 \%$ of $\ln (0.8 A)$ to 300 A <br> - With CT (400A AC) <br> $0,0.4 \%$ of $\ln (1.6 \mathrm{~A})$ to 600 A <br> - With CT (5A) <br> $0,0.4 \%$ of $\ln (0.2 A)$ to 50 A <br> 0 , to 1.5 times CT rating (for 5 A ) <br> (converted into CT secondary: 7.5A) <br> (Max. display range: up to 9,999A) <br> - Demand time setting: 0, 1 to 15 min <br> (by 1 min step) <br> 30min setting: Available | 4-digit | $\pm 1.5 \%$ : R- and T-phase $\pm 2.5 \%$ : S-phase |
| Demand value and max. demand value of total harmonic current *2 |  | 4-digit | $\pm 2.5 \%$ |
| Active power ( $\pm$ ) <br> Demand power <br> Max. active demand power value |  | 4-digit | $\pm 1.5 \%$ |
| Reactive power ( $\pm$ ) |  | 4-digit | $\pm 3 \%$ |
| Power factor ( $\pm$ ) |  | 3-digit | $\pm 5 \%$ (Converted into a phase angle of $90^{\circ}$ ) |
| Active electric energy (+only) |  | 5-digit | Equivalent to JIS ordinary class (pf: 0.5-1.0--0.5) |
| Reactive electric energy ( $\pm$ absolute value addition) |  | 5-digit | $\pm 5 \%$ |
| Voltage | Converted into an input voltage 60 to 264 V AC | 4-digit | $\begin{aligned} & \pm 1.5 \% \\ & \pm 2.5 \%: \text { Vv-w } \\ & \hline \end{aligned}$ |
| Frequency *3 | 45 to 66 Hz *2 | 3-digit | $\pm 0.5 \%$ |
| Leakage current (lo/lob) *4 Max. demand value | 0, 10 to 1000 mA | 4-digit | $\pm 2.5 \%$ |

Note: *1 The measurement accuracy is a value for FS (full span).
${ }^{* 2}$ The total harmonic current relates only to phase R and phase T . Only the demand value and max demand value are displayed. The current value is not displayed.
${ }^{* 3}$ If the frequency is out of the measurement range (lower than 45 Hz or higher than 66 Hz ), $0.0[\mathrm{~Hz}]$ is displayed.
${ }^{* 4}$ Maesurement of leakage current is possible only with UM03-ARA3G.

- Output specifications

| Item | UM03-ARA3 | UM03-ARA3G | Specification |  |
| :--- | :--- | :--- | :--- | :--- |
| Watt-hour pulse output | Provided | Provided | Transistor open collector output 35V DC 100mA |  |
| Alarm output | Current prealarm (OCA), power alarm * | Provided | Provided | Replay output 250V AC 1A |

| Power alarm *1 | 0 to 9999kW <br> (1kW step) |  |  |  |
| Leakage current alarm (OCG) (lo operation) | Operate current 100, 200, 500mA, <br> Lock | 0.1, 0.3, 0.5, 1.0s | $75 \% \pm 5 \%$ of setting value | $75 \% \pm 5 \%$ of setting value ( $\mathrm{min} \pm 25 \mathrm{~ms}$ ) |
| Leakage current prealarm (OCGA) | $\begin{array}{\|l\|} \hline 50 \pm 5 \mathrm{~mA} \\ 100 \text { to } 500 \mathrm{~mA} \\ (50 \mathrm{~mA} \text { step), Lock } \\ \hline \end{array}$ | $\begin{aligned} & 0.1,0.3,0.5,1.0 \\ & 10 \text { s or demand time *2 } \end{aligned}$ | $\pm 5 \%$ | $\pm 5 \%$ |

[^14]Communications specifications

| Item | Specification | Factory setting |
| :--- | :--- | :--- |
| Standard | EIA-485 | - |
| Transmission system | 2-wire half duplex | - |
| Data exchange | $1:$ N polling/selecting | - |
| Transmission distance | 1000 m (total length) | - |
| No. of connectable units | max.32 (including master) | - |
| Station number setting | 1 to 99 | Without station number setup |
| Transmission characters | ASCII | - |
| Transmission speed | 4800,9600, or 19200 bps (selectable) | 19200 bps |
| Data format | Number of start bits | 1 (fixed) |
|  | Data length | 7 or 8 bits (selectable) |
|  | Parity bit | None, even,or odd (selectable) |
|  | Number of stop bits | 1 (fixed) |

## Front panel

## - Terminal layout

Note: Alarm output terminal (2) (3) and ZCT input terminal (1) (2) of the UM03-ARA3 (without leakage current measuring function) are NC terminals. Do not connect anything to these terminals.

## Dimensions, mm

Mass: Approx. 400g

Panel cutting

## Power Monitoring Equipment

MCCB with ZCT and zero-phase CT

## Molded case circuit breakers with ZCT

## Description

A leakage current monitoring and breaking system can be easily constructed by combining one of the following models with a UM04 integrated power monitoring unit or a UM03-ARA3G single-circuit power monitoring unit with leakage current measurement.

## ■ Specifications, MCCB with ZCT for line protection

Note: Twist the ZCT secondary wires (normally once every 50 mm ) and separate the wires from power line.

## Power Monitoring Equipment Current transformers CC2

## Current transformers, CC2

## - Description

Designed for even easier handling. Line-up consists of two types; models exclusively used for FUJI power monitoring unit (F-MPC 04 series), and models for general-purpose instrumentation.

- Improved design enables easier mounting.
- Large $\mathrm{K} \rightarrow \mathrm{L}$ display allows easier identification of primary conductor direction.
- Hook attached makes it easier to secure the primary conductor with a cable-tie.
- Clamping diode built in CT will not burn out even with the secondary circuit open (except for the CC2D81).

## ■ Specifications

- CTs are dedicated CTs. Genaral-purpose CTs (secondary rated current 5A or 1 A ) cannot directly be connected bacause there is a risk of damage.

| Rated frequency | 50 to 60 Hz |  |  |  |  |
| Overcurrent strength | 1.OIn continuous |  |  |  |  |
| Ratio error | $\pm 1 \% / \mathrm{ln} \pm 1.5 \% / 0.2 \mathrm{ln}$ |  |  | $\pm 1 \% / \mathrm{ln} \pm 1.5 \% / 0.2 \mathrm{ln} \pm 3 \% / 0.05 \mathrm{ln}$ |  |
| Phase difference | 90 $\pm 90$ / In | 60 $\pm 60$ '/ln | $\pm 80$ //n | $\pm 80 ' / \mathrm{ln}, \pm 100 / / 0$ |  |
| Rated burden | 0.5 VA ( $0.5 \Omega$ load resistance) |  |  |  |  |
| Insulation resistance | $500 \mathrm{VDC} / 100 \mathrm{M} \Omega$ or more (between sensor core and output lead wire) |  |  | $500 \mathrm{VDC} / 100 \mathrm{M} \Omega$ or more (between through hole and output) |  |
| Dielectric strength | 2000VAC/min <br> (between sensor core and output lead wire) |  |  | 2500VAC/min (between through hole and output) |  |
| Output protection | $\pm 1.4 \mathrm{Vp}$ with built-in clamp diode |  |  |  |  |
| Operating conditions | -20 to $75^{\circ} \mathrm{C}, 80 \% \mathrm{RH}$ or lower (No condensation) |  |  |  |  |
| Split portion securing method | Clamp |  |  |  |  |
| Mounting method | Hanger |  |  |  |  |
| Connection | Heat-resistant IV cable AWG18, 1,000mm |  |  | Vinyl cabtire cable $0.75 \mathrm{~mm}^{2} \times 1,000 \mathrm{~mm} \mathrm{2}^{2}$-core |  |
| Mass | 300 g |  |  | 500 g |  |
| Combination CT-BOX | UM04X-1 |  |  | UM04X-1 |  |

Note: • To cope with extension of CT output wire, CT with connector and relay cable are available.

- For CTs without build-in output protection diode, be sure to draw a primary current after connecting a rated load. Drawing a primary current without connecting
the rated load is dangerous bacause high voltage appears at the output terminal.
- CT-BOX to be used together with general-purpose CT (10 to 7500A/5A) is the UM04X-5.

## Terminal relay RS16

## Description

The RS16 relay, in combination with F-MPC04 (type: UM01) power monitoring unit, outputs the current prealarm signal and leakage current pre alarm signal, and the signal to trip circuit breakers.

## ■ Specifications

| Type |  | RS16-DE04H |
| :---: | :---: | :---: |
| No. of connectable circuits |  | 5 |
| Operate time |  | 10 ms or less |
| Release time |  | 10 ms or less |
| Vibration | Malfunctions durability | $10-55 \mathrm{~Hz} 1 \mathrm{~mm}$ double amplitude (0.61N max.) |
|  | Mechanical durability | $10-55 \mathrm{~Hz} 1 \mathrm{~mm}$ double amplitude ( 0.61 N max.) <br> 3 times in each $\mathrm{X}, \mathrm{Y}, \mathrm{Z}$ direction, total 18 times |
| Shock | Malfunctions durability | $100 \mathrm{~m} / \mathrm{s}^{2}$ |
|  | Mechanical durability | $200 \mathrm{~m} / \mathrm{s}^{2}, 2$ hours in each $\mathrm{X}, \mathrm{Y}$, $Z$ direction, total 6 hours |
| Operating ambient temperature |  | -25 to $55^{\circ} \mathrm{C}$ (no icing or no condensation) |
| Operating ambient humidity |  | 35 to 85\%RH |
| Terminal screw size |  | M3 |
| Tightening torque |  | 0.5-0.7N • m |
| Mounting |  | Rail mounting (screw mounting also available) |
| Applicable crimp terminal |  | R1.25-3 (Max 6mm) |
| Applicable wire size |  | Max. 1.4mm dia. |
| LED color | Operation indication | Red |
|  | Power source indication | Green |
| Coil surge suppressor |  | Diode |
| Max. No. of rely insertion |  | 50 |
| Insulation resistance (initial) |  | 100M $\Omega$ (500V DC megger) |
| Dielectric strength | Between contact and coil | 2000V AC, 1 minute |
|  | Between same polarity contacts | 1000 V AC, 1 minute |
|  | Between reverse polarity contacts | 2000V AC, 1 minute |
|  | between heteropolar coils | 500V AC, 1 minute |
| Mass |  | 200 g |

## AU-CW21B1

## Connector terminal-block, AU-CW21B1

## Description

The AU-CW21B connector terminal-block, in combination with the FMPC04 (type: UM04) power monitoring unit, can output a kWh pulse.

- Specifications

| Type | Front mounting | AU-CW21B1-04 |
| :--- | :--- | :--- |
|  | Rear mounting | AU-CW21B1-04R |
| Insulation voltage | 60 V AC/DC |  |
| Continuous current | $1 \mathrm{~A}\left(\right.$ at $\left.40^{\circ} \mathrm{C}\right)$ |  |
| No. of terminals | 21 |  |
| No. of connectors | 20 |  |
| Terminal screw size | M 3.5 |  |
| Insulation resistance | $100 \Omega$ or more |  |
| Dielectric strength | 500 V 1 min |  |
| Allowable ambient temperature | -5 to $+40^{\circ} \mathrm{C}$ |  |
| Allowable ambient humidity | 45 to 85\%RH |  |
| Flame resistance | $\mathrm{UL94-V1}$ |  |
| Connection | Multi-core cable | $\mathrm{AUX014-20} \square^{*}$ |
| cable | Flat cable | $\mathrm{AUX024-20} \square^{*}$ |

Note: * Specify cable length by replacing $\square$ with $1: 1 \mathrm{~m}, 2: 2 \mathrm{~m}$, or $3: 3 \mathrm{~m}$.

## Catalog Disclaimer

The information contained in this catalog does not constitute an express or implied warranty of quality, any warranty of merchantability of fitness for a particular purpose is hereby disclaimed.

Since the user's product information, specific use application, and conditions of use are all outside of Fuji Electric FA Components \& Systems'control, it shall be the responsibility of the user to determine the suitability of any of the products mentioned for the user's application.

## One Year Limited Warranty

The products identified in this catalog shall be sold pursuant to the terms and conditions identified in the "Conditions of Sale" issued by Fuji Electric FA with each order confirmation.

Except to the extent otherwise provided for in the Conditions of Sale issued by Fuji Electric FA, Fuji Electric FA warrants that the Fuji Electric FA products identified in this catalog shall be free from significant defects in materials and workmanship provided the product has not been: 1) repaired or altered by others than Fuji Electric FA; 2) subjected to negligence, accident, misuse, or damage by circumstances beyond Fuji Electric FA's control; 3) improperly operated, maintained or stored; or 4) used in other than normal use or service. This warranty shall apply only to defects appearing within one (1) year from the date of shipment by Fuji Electric FA, and in such case, only if such defects are reported to Fuji Electric FA within thirty (30) days of discovery by purchaser. Such notice should be submitted in writing to Fuji Electric FA at 5-7, Nihonbashi Odemma-cho, Chuo-ku, Tokyo, Japan. The sole and exclusive remedy with respected to the above warranty whether such claim is based on warranty, contract, negligence, strict liability or any other theory, is limited to the repair or replacement of such product or, at Fuji Electric FA's option reimbursement by Fuji Electric FA of the purchase price paid to Fuji Electric FA for the particular product. Fuji Electric FA does not make any other representations or warranties, whether oral or in writing, expressed or implied, including but not limited to any warranty regarding merchantability or fitness for a particular purpose. Except as provided in the Conditions of Sale, no agent or representative of Fuji Electric FA is authorized to modify the terms of this warranty in writing or orally.

In no event shall Fuji Electric FA be liable for special, indirect or consequential damages, including but not limited to, loss of use of the product, other equipment, plant and power system which is installed with the product, loss of profits or revenues, cost of capital, or claims against the purchaser or user of the product by its customers resulting from the use of information, recommendations and descriptions contained herein. The purchaser agrees to pass on to its customers and users, in writing at the time inquiries and orders are received by buyer, Fuji Electric FA's warranty as set forth above.

## . Caution "Safety precautions"

- Operate (keep) in the environment specified in the operating instructions and manual. High temperature, high humidity, condensation, dust, corrosive gases, oil, organic solvents, excessive vibration or shock might cause electric shock, fire, erratic operation or failure.
- Follow the regulations of industrial wastes when the product is to be discarded.
- The products covered in this catalogs have not been designed or manufactured for use in equipment or systems which, in the event of failure, can lead to loss of human life.
- If you intend to use the products covered in this catalog for special applications, such as for nuclear energy control, aerospace, medical, or transportation, please consult our Fuji Electric FA agent.
- Be sure to provide protective measures when using the product covered in these catalogs in equipment which, in the event of failure, may lead to loss of human life or other grave results.
- Follow the directions of the operating instructions when mounting the product.

## INDIVIDUAL CATALOG 09

Fuji Electric FA Components \& Systems Co., Ltd.
5-7, Nihonbashi Odemma-cho, Chuo-ku, Tokyo, 103-0011, Japan
URL http://www.fujielectric.co.jp/fcs/eng

[^0]:    (Be sure to specify the input value.)

[^1]:    $\star^{3}$ The multiplying factor is 0.01 , but 0.1 is displayed for the multiplying factor.
    ${ }_{4}$ (Four digits are displayed for the integer portion, and four digits are displayed below the decimal point for the expanded display.)
    ${ }^{4}$ A combination of two of the following outputs can be used: pulse output, alarm output, and CPU error output (only one CPU error output can be used).

[^2]:    Note: *1 The addressing of RS-485 can be set by the WH7PD PC loader.

[^3]:    * Refer to the table above or rated specifications, prices, and shipment.

[^4]:    Note *1: This gives the value when lightning surge voltage is applied between wires with one wire grounded
    *2: This gives the total value for voltage to ground for each wire. Category C 2 indicates the current value with power applied 5 times each for positive and negative polarities at a current waveform of $8 / 20 \mu \mathrm{~s}$, and category D1 indicates the current value with power applied one time each for positive and negative polarities at a current waveform of $10 / 350 \mu \mathrm{~s}$.

[^5]:    Note *1: This gives the value when lightning surge voltage is applied between wires with one wire grounded.

[^6]:    Notes: * Replace the $\square$ mark by the secondary current code

[^7]:    Note: * Value at shipment

[^8]:    $\mathrm{K}_{2}$ : Figures obtained by $\cos \theta_{2}$

[^9]:    ○ Available - Not available

[^10]:    *1: The operation guaranteed temperature is a temperature at which operation is guaranteed within two times of the guaranteed accuracy value at JEC characteristics guaranteed temperature, or within the accuracy of influence of JIS temperature.

[^11]:    *1: The operating time of protective OC 51 is saturated at about 150 ms .
    The operating time will be saturated at 20 times of CT rated current when the setting exceeds $200 \%$.
    For example, the operating time becomes $833 \%(=2000 \% /(240 \% \cdot 100))$ of the CT rated current in $240 \%$ setting.

[^12]:    Note *1: FMPC 04 (UM04) is connected to CT via CT-BOX. For combination of F-MPC04 (UM04), CT-BOX and CT, See page 09/120 and 09/135; "Applicable CT."

[^13]:    Note : Use the display and set unit to change the transmission setting.
    The communications specifications cannot be changed through the host controller.

[^14]:    Note: *1 Select either the current pre-alarm output or the power alarm output through setup.
    ${ }^{* 2}$ When demand time is selected, the unit operates on lob (leakage current only with fundamental wave).
