## H.V. Distribution Equipment <br> Vacuum circuit breakers <br> General information

## ■ FUJI vacuum circuit breakers

Vacuum circuit breakers are compact circuit breakers designed for safe operation, high reliability and easy maintenance, and are widely used for various types of high voltage circuits. FUJI V-circuit breakers (VCB) have been developed through the use of our many years of successful experience and advanced technology. They are compact and light-weight, and are available in a number of current ratings.

## - HS series

These types are available in all ratings from 3.6 to 36 kV , and can be applied to a variety of H.V. switchgear. The motorspring stored-energy types feature autoreclosing. The HS types are comparatively high in breaking current with ratings of over 7.2 kV , 20 kA .

- Breaking currents: 12.5 kA to 50 kA
- Rated voltage: 3.6 kV to 36 kV
- Standards: JEC, IEC

See page 12/4.

- Auto. V

Auto. Vs are provided with a built-in electronic overcurrent relay and toroidaltype CT.
They require little space for installation and also facilitate the system wide protective coordination.
The inverse-time operating and instantaneous trip currents can be set by means of the dial.

- Breaking currents: 8kA, 12.5kA
- Rated voltage: 3.6/7.2kV
- Standards: JIS C4603

See page 12/26.

## - Multi VCB

The Multi VCBs are general purpose VCBs which are small in size and simple in construction thus allowing them to be applied to many types of switchgear.

- Breaking currents: 8kA, 12.5kA
- Rated voltage: 3.6/7.2kV
- Standards: JIS C4603

See page 12/45.

[^0]
## H.V. Distribution Equipment Vacuum circuit breakers Advantages

## - Description

3.6 kV to $36 \mathrm{kV}, 600$ to $4000 \mathrm{~A}, 12.5$ to 50 kA

## The revolutionary arc extinguishing system

## - Rotary

FUJI VCBs have employed a unique design principle in which the contacts are provided with a succession of slits having toroidal-type CrCu contacts mounted on them.
The arc is driven round the circular contact surface as it is being extinguished. Since the arc is not localized at one point there is no fear of overheating.
This results in much improved interelectrode dielectric strength so ensuring excellent breaking capability. Moreover, uneven contact wear is minimized.

## - Getter

FUJI vacuum interrupters make use of the gettering effect. The toroidal-type contacts are made of a
 special chromium-copper
 (CrCu) alloy specially developed by FUJI so as to ensure a large "getter" quality.
The metallic gases thus produced at interruption and left in the vacuum are quickly absorbed by the getter. The gases are neutralized so maintaining the high degree of vacuum.
The interrupters require a minimum of attention over their long service life.

## - Surge

Switching surges can be generated at small current breaking due to the VCB inherent chopping current.

FUII has paid much attention to this problem, and after much effort on design and materials research it has been possible to reduce the chopping current to 3.5 Amps. This very small chopping current means that the corresponding surge voltage will be reduced and cost efficient surge protection can be carried out for motors, transformers and other load equipment.

The revolutionary arc extinguishing system

## H.V. Distribution Equipment Vacuum circuit breakers Advantages

## - Progress of arc extinction

Arcs generated by VCBs have inherent characteristics that change when approximately 10 kA is reached. Less than 10kA a dispersed arc occurs, over this value the arc is concentrated. The photos were taken consecutively and illustrate an interruption in the 25 kA range (concentrated arc). About 41/2 rotations occurred ( 10 ms at 50 Hz ). This time is typical, but varies according to breaking current and arcing times.

## Explanation

1. The contacts begin to open and the arc moves from the center to the left hand side.
2. 3. The arc is driven round the toroidal-type contact surface.
1. The contacts are in the full open position just before interruption is completed.

## - Definitions

- What is the action of the "getter"?

Sometimes called a "degasser" the "getter" uses a special material such as zirconium alloy that has the property of absorbing metallic gases in a vacuum. This allows the high degree of vacuum to be maintained.

## - Switching surges and VCBs?

Switching surges can be generated when breaking currents within several hundreds range.
VCB inherent switching surges are generated under certain specific conditions which mainly comprise current chopping surges and multiple current reignition surges. No problem is posed by switching surges when breaking current exceeds several hundred amperes.

## Surge voltages

The value of the surge voltage due to switching surges varies according to the $\uparrow$
load circuit conditions.
This can be expressed in the following simple formula:
Surge voltage $=$ Surge impedance $\times$
Chopping current
Therefore, it is necessary to keep the chopping current low in order to reduce the surge voltage to the minimum. The peak transient voltage is obtained by adding to the above calculation the voltage on the load side at the time of current chopping.

## Chopping surge

The chopping surge occurs when a low current is interrupted, the arc is unstable before current becomes zero and the current is forcedly chopped. At this time a surge is generated by the energy remaining in the load inductance. Example:
When the no-load interruption of a transformer is carried out the exciting current only is interrupted.

## Chopping surge

## Multiple reignition surge

The multiple reignition surges can occur when breaking currents range from tens to hundreds of amperes. Although no problem is normally posed even when breaking these currents,

Ic : Chopping current
VI : Voltage at load side
Vs : Surge transient voltage
$V_{P}$ : Peak transient voltage $\mathrm{V}=\mathrm{VI}+\mathrm{Vs}$
VS $=$ Surge impedance $\times$ Ic
Surge impedance:

$$
Z=\sqrt{\frac{L}{C}}
$$

## H.V. Distribution Equipment <br> Vacuum circuit breakers <br> HS series/General information

## Description

HS type 3.6 kV to 36 kV up to 63 kA . FUJI HS series vacuum circuit breakers are designed to meet the many special needs of industry. The vacuum interrupter system employed reflects the latest technology. The circuit breaker has a very stable and constant breaking performance over a wide range of currents up to the rated short circuit current value.
The motor spring type ( M ) closing system can perform high speed reclosing.
The contacts are made of a special alloy and require no maintenance over their long life time.
The interrupter is provided with a contact-wear indicator which gives notice when replacement is required. The open and close positioning indicator, operating counter, pushbutton for manual interruption and manual closing device are conveniently installed on the control section of the dead-front operating panel, and are isolated from the high-voltage breaking section for safety reasons and to facilitate operation and inspection. FUJI VCBs comprise the fixed mounted $(P)$ type and cradle ( X and Y ) types. Since the cradle version is provided with a draw-out system switchgear assembly is easily carried out.

## ■ Ordering information

Specify the following:

1. Type number
2. Rated voltage, current and frequency
3. Rated breaking capacity
4. Installation system
5. Operating voltage and frequency ( $M$ ) of closing system
6. Voltage and current of tripping system
7. Optional accessories, if required

Series of FUJI VCB

## H.V. Distribution Equipment <br> Vacuum circuit breakers HS series

Installation and supplied accessories

| Vacuum circuit breaker | Cradle | Construction | Accessories |
| :---: | :---: | :---: | :---: |
| P-fixed mounting type <br> AF93-314 |  | The VCB shall be fixed to the switchgear by means of 4 bolts. No draw-out system is provided. Wheels are provided to facilitate movement or transport. <br> Open type cubicle | - Clamp bolts (4 ea. for one unit) <br> - Closing handle <br> - Plug-in connector for control circuit <br> - On-off counter |
| X-draw-out type <br> AF93-312 |  | A cradle is provided with a draw-out system. This cradle makes unnecessary the provision of rails or main circuit connector for the switchgear. No mechanical adjustment is required. <br> JEM 1425 <br> Class CW type metal enclosure | - On-off counter <br> - Cradle with draw-out system (Main circuit connector, earthing shoe, rail, etc.) <br> - Plug-in connector <br> - Closing handle <br> - Draw-out handle |
| Y-draw-out type <br> AF93-313 | SF-1055 | A cradle is provided with a draw-out system to accept the metal-clad switchgear, which is provided with a shutter. All the necessary parts are provided for this type of breaker. The switchgear is very easy to assemble. <br> JEM 1425 <br> Class PW or MW type metal-clad switchgear | - On-off counter <br> - Cradle with draw-out system (Main circuit connector, earthing shoe, rail, shutter, etc.) <br> - Plug-in connector <br> - Closing handle <br> - Draw-out handle |

## ■ Optional accessories

Capacitor trip device/VCB-T1A, T2A

KK04-064
This is used when the trip circuit is connected to an AC power supply, and as well as the capacitor,
semiconductors are also built in. It provides a DC output and the trip coil is DC rated.

Vacuum condition tester/VC-1A
See page 12/25.

| Type | Description |
| :--- | :--- |
| VCB-T1A | Capacitor trip device 100/110V AC |
| VCB-T2A | Capacitor trip device 200/220V AC |
| AF3320R3TXG0542 | C-R surge absorber for 3.3 kV |
| AF6620R3TXG0543 | C-R surge absorber for 6.6 kV |
| VC-1A | Vacuum condition tester 100V AC 50/60Hz |

Lifting dolly L-2HS, L-4HS

Lifting dolly

## H.V. Distribution Equipment Vacuum circuit breakers Application guide

## - Application guide of surge absorber

When VCBs are interrupted especially under specific
overlapping conditions, chopping surges or surges due to multiple restrikes will cause an escalating effect.
It is therefore recommended that surge absorbers and arresters are fitted to protect motors or transformers.

## H.V. Distribution Equipment Vacuum circuit breakers Auto. V

## Auto.V <br> - Description

7.2/3.6kV, 400A, 600A, 8kA, 12.5kA

FUJI Auto. Vs are vacuum circuit breakers which incorporate a built-in solid-state OCR and CT.
As they do not require to have a CT installed inside the switchgear cubicle or an OCR fixed to the front panel, space is saved in the cubicle and wiring and installation are simplified.
A system protection is easily arranged using Auto. Vs with primary circuit breaker and also a protective coordination with low voltage MCCBs. The CT is a compactly built toroidal type and it is fitted to the upper part of the VCB. Its overcurrent withstanding value is as large as $12.5 \mathrm{kA}, 1 \mathrm{sec}$.

## - Features

- Built-in solid-state OCR and CT are provided
- System protective coordination is easily arranged using the VCBs.
- Compactly assembled, so saving space
- The built-in CT has a large overcurrent withstand value of 12.5 kA .
- The setting range of the rated current is 24 A to 320 A .

- Applicable to the receiving and distribution facilities of 6 kV , 170 to 2000kVA.
- Specifications

## H.V. Distribution Equipment <br> Vacuum circuit breakers <br> Auto. V

## Design features

The four dials facilitate the setting of the overcurrent protection as followed:

Operating current and time setting of inrush currents due to either transformers or capacitors and a coordination can be arranged with primary circuit breakers. It can be set to operate at between 5 and 15 times its operating current.
range for Auto. V

## - Operating time

No. of steps: 16 (T=50 to $\mathrm{T}=0.5$ )
The operating time setting dial of the solid-state OCR's corresponds with the time lever of the induction type OCR's. It has 16 steps, from
$\mathrm{T}=50$ to $\mathrm{T}=0.5$.

- Instantaneous trip current

Trip current: 5 to 15 times the operating current.
This device is designed to instantaneously trip when a large current flows due to a short-circuit fault. It can be set so it does not operate in the face

## - Rated operating current

Rated current range: 24 to 320A
(8 to 80A)
No. of steps: 15
Steps from 24A to 320A can be set by the two dials-CT's primary current dial and multiplying factor dial of primary current. These breakers are most suitable for receiving and distributing facilities with capacities from 6 kV , 170 to 2000 kVA . Since the rating for the primary current can be freely changed expenses for changing the CT ratio can be saved when expanding electrical facilities.

Rated operating current setting dials
The combination of these two dials permits the setting of 15 possible combinations.
(1) Rated operating current value (A)

| Primary current <br> setting dial | Multiplying factor dial |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: |
|  | 0.8 | 1.0 | 1.2 | 1.4 | 1.6 |  |
| Standard | 30 A | 24 | 30 | 36 | 42 | 48 |
|  | 75 A | 60 | 75 | 90 | 105 | 120 |
|  | 200 A | 160 | 200 | 240 | 280 | 320 |
|  | TEST | Set at this point when <br> carrying out the operating <br> test of OCR's |  |  |  |  |

## (2) Terminals for operating tests

When carrying out the operating test, set the rated operating current setting dial at the TEST position and apply the test current between the C1-com and C2-com terminals.

## 3 Instantaneous tripping current setting dial

This can be set to 5 to 15 times the rated operating current value. When set at the LOCK position the instantaneous function stops.

## H.V. Distribution Equipment Vacuum circuit breakers Auto. V

## - Design features

- Auto. V improves system dependability
FUJI solid-state type OCR's are provided with the ideal inverse time characteristics instead of the conventional electronic type linear characteristics.
In the case of the conventional induction type OCR's their long inverse time zone in characteristic curves do not extend smoothly, and so they do not meet the requirements of the operating characteristics of L . V. breakers thus making it difficult to arrange a coordination. The operating time of Auto. V's at $300 \%$ current has been greatly improved to 10 sec . as against 2 to 3 sec for conventional OCR's. The function to extend the operating time by five times, an option of the previous Auto. V is included in the new Auto. V as a standard feature.

## - Inertia characteristics exceed 90\%

The inertia characteristics correspond with the "non-operating characteristics (permissible)".
When carrying out the coordination with the low voltage MCCB's, it is necessary to consider the "non-operating characteristics" and "coordination" in which the inertia characteristics are taken into consideration.
In the case of the induction type OCR's the inertia characteristics normaly exceed $60 \%$, thus make it difficult to establish coordination with low voltage MCCB's. On the other hand in the electronic type OCR's their inertia characteristics exceed $90 \%$, giving them ideal operating characteristics.

- The overcurrent withstanding value of the CT is 12.5 kA
The CT built in the Auto. V is extremely small in size but its toroidal design permits it to withstand overcurrents having values as large as 12.5 kA for 1 sec .

CT with large overcurrent constant The internal CT's overcurrent constant of 20 or more was achieved by combining a CT with a very low activation power OCR. When using a CT in combination with a protective relay, the CT's overcurrent constant must be large enough for the overcurrent. To determine compatibility, overall OCR operation must be checked from the combined CT and OCR characteristics as shown in the figure at right.

The operating characteristics of Auto. V and induction type OCR (FUJI CH1-53 type)

The inertia characteristics of Auto. V and induction type OCR

CT overcurrent constant and OCR
operation characteristics

## ■ Operating characteristics of

 overcurrent relaysThe curves indicate the time-current characteristics of OCR's. These characteristics meet the requirements of JIS C4602 "Overcurrent Relays for H. V. Power Receiving"

Note: For practical dial setting method or the test method of solid state OCR's please contact FUJI.

## Note:

* Overcurrent constant

In CT the secondary current increases proportionally o the increase of the primary current.
When the value exceeds a certain value a saturation akes place due to magnetic saturation. The overcurrent constant(n) indicates the value obtained by dividing, the current value at the point where the error reaches $10 \%$, by the rated current.

JEC190 (1977) instrument transformer for protective relay is stipulated as " $n>5, n>10$ and $n>20$ ". It is necessary that they have an adequately large vercurrent constant when incorporated with protective relays.

## H.V. Distribution Equipment <br> Vacuum circuit breakers <br> New-Auto. V

## New-Auto.V

## - Description

The New-Auto.V is a circuit breaker that consists of a standard MULTI.VCB provided with a CT (current transformer), and incorporates a multiple function protectors and controllers to prevent equipment from overcurrent and other factors, thus saving energy and reducing installation man-hour.

- Multiple function protectors and controllers offers versatile features such as ground-fault directional, ground-fault overvoltage, undervoltage, and overvoltage protective functions in addition to overcurrent protection. It also includes measurement functions for a variety of items, such as current, voltage, power, power-factor, frequency, and zero-phase voltage values.
- Highly reliable overcurrent protection
- Withstand overcurrent of CT: 12.5kA
- Overcurrent constant of CT: $n>20$

■ Specifications

Note: * ${ }^{1}$ Maximum values when the VCB is used with a $6 \%$ reactor connected in a 6.6 kV AC circuit.
Halve these values for a 3.3 kV AC circuit.

Notes *1 When using ZCT, FUJI's dedicated product ZCT- $\square$ is recommended. For details, please contact FUJI.
*2 Do not apply 2 kV between lines.
${ }^{* 3}$ When you use AC power as control power supply, and 27 (UV) function, and you require that the operating time setting at power failure be operated more than 2 s , the use of a UPS or AC power supply UM2P-A1 is recommended (sold separately).
*4 When you use zero-phase potential input device, use FUJI's dedicated ZPD-1.

## H.V. Distribution Equipment Vacuum circuit breakers New-Auto. V

■ Multiple function protectors and controllers offers versatile features.

- A host of protective functions
- Provided with ground-fault directional, ground-fault overvoltage, undervoltage, and overvoltage protective functions in addition to overcurrent protection
- Allows precise settings for relay operation characteristics, to ensure easy protective coordination.
- Additional measurement functions
- Includes measurement functions for a variety of items, such as current, voltage, power, power-factor, frequency, and zero-phase voltage values.
- Equipped with transducer and communications functions.
- The transducer function (4 channels) enables the use of analog meters.
- The communications function (RS-485) enables status and other monitoring items.

■ Wide-range CT supports equipment across a wide capacity range

- Range of operating current settings for overcurrent protection: 15 to 390A
- Covers an equipment capacity range of 170 to $4,400 \mathrm{kVA}$.

## Rated operating current (A)

| CT rating | $50 \%$ | $60 \%$ | $70 \%$ | $80 \%$ | $90 \%$ | $100 \%$ | $110 \%$ | $120 \%$ | $130 \%$ |
| :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| 30 A | 15 A | 18 A | 21 A | 24 A | 27 A | 30 A | 33 A | 36 A | 39 A |
| 100 A | 50 A | 60 A | 70 A | 80 A | 90 A | 100 A | 110 A | 120 A | 130 A |
| 300 A | 150 A | 180 A | 210 A | 240 A | 270 A | 300 A | 330 A | 360 A | 390 A |

- Instantaneous operating current: 1 x to 20 x CT rated current at $0.2 x$ increments
- Time-lag time-magnification: Setting between 0.5 and 100
- Greatly simplifies main circuit connections
- The compact, built-in CT eliminates the need for CT space or CT installation work on distribution boards.

## H.V. Distribution Equipment

## Vacuum circuit breakers

## Auto. V/New-Auto.V

Optional accessories

- Supporter

Supporter kit for stabilizing the back of fixed type B, C Auto. V on the floor.

Type: C

- Vacuum condition tester VC-1A
For further information see page 12/25.

SH-27

- Capacitor trip device

VCB-T1A, T2A, VCB-T1PA, T2PA
These are used when the trip circuit is connected to AC power supply.

| Type | VCB-T1A <br> VCB-T1PA | VCB-T2A <br> VCB-T2PA |
| :--- | :--- | :--- |
| Rated input <br> voltage | $100 / 110 \mathrm{VAC}$ | $200 / 220 \mathrm{~V} \mathrm{AC}$ |
| Shunt trip coil volt | $100 / 110 \mathrm{~V}$ DC | $200 / 220 \mathrm{~V}$ DC |

## Wiring diagram

- Draw-out extension rail (HZ2AE)

Used with draw-out type (X, Y, U).
Use of an extension rail makes daily checking easier because the VCB can be pulled out of the panel.
Double stack types do not require lifters or chain blocks.

KK03-079

- C-R type surge absorber AF3320R3TXG0542
AF6620R3TXG0543
For further information see page 12/25.
- Testing jumper (HZ2AG)

Use to test remote ON/OFF operation of a VCB.

Surface mounting
VCB-T1A, T2A

Name
r1: Charging resistor
r2: Discharge resistor
r3: Series resistor
Si: Silicon rectifier diode
PL: Pilot lamp
Flush mounting VCB-T1PA, T2PA

SW: Discharge switch
Z: Surge absorber

- Position indicating switch (HZ2AD)

Switch for indicating the service positions and test positions of draw-out (X, Y, U). Used for interlocking to other devices attached to the cradle for draw-out type.

SG 1075

- Lifter

C: Electrolytic capacitor

■ Optional accessories

- AC power supply unit (for New-Auto.V)

| Type |  | UM2P-A1 |
| :---: | :---: | :---: |
| Rated input voltage |  | 100/110V AC (Allowable variation: 85 to 132V) |
| Rated output | Control power of multiple functions protectors and controllers | 100/110V DC 0.15A |
|  | Power supply of capacitor trip device | Rated charge voltage: 140V DC ( $\mathrm{C}=1500 \mu \mathrm{~F}$ ) |
| Power failure compensation time | Control power of multiple functions protectors and controllers | 1s |
|  | Power supply of capacitor trip device | When power failure occurs at 60V AC, the charge voltage is 75DC or higher after the elapse of 30 s . |
| Operating temperature range |  | -10 to $+60^{\circ} \mathrm{C}$ (no icing or no condensation) |
| Insulation resistance |  | Between all electrical circuits and ground: $10 \mathrm{M} \Omega$ (500V DC megger) |
| Withstand voltage |  | Between all electrical circuits and ground: 2000V AC for 1min |
| Lightning impulse |  | Between all electrical circuits and ground: 4500V 1.2/50 $\mu \mathrm{s}$ |
| Mass |  | 1.5 kg |
| Notes: The power failure compensation time of this AC connect an external capacitor (not supplied) tog |  | r supply unit is 1s. If you use the UV (undervoltage) function with the operation between this unit's terminals 5 and 6 , by referring to the table below. |

| Operating time of protection <br> $27(U V)$ | External capacitor capacitance | Example of capacitor |
| :--- | :--- | :--- |
| 1.2 to 2 s (at 0.2s increments) | $1500 \mu \mathrm{~F}$ (Withstand voltage: 200V DC min.) | Nichicon-made LNT2D152MSM |
| 3 to 5 s (at 1s increments) | $6800 \mu \mathrm{~F}$ (Withstand voltage: 200V DC min.) | Nichicon-made LNT2D682MSM |
| 6 to 10 s (at 1s increments) | $1600 \times \mathrm{t}(\mu \mathrm{F})$ |  |
|  |  |  |

Outline of devices used in combination

- Specifications of AC meter (for Auto.V)

| Product | AC meter *1 |
| :--- | :--- |
| Type | FR-80AS (for Auto.V) |
| Operating principle | RMS rectifying type |
| Standard scale | Normal scale |
| Full scale $[\mathrm{A}]$ | Low ratings: 20,40, and 100 <br> Standard ratings: 60, 150, and 400 *2 <br> Mass (g) |
| Class | 2.5 (JIS C C 1102) |
| Dimensions $[\mathrm{mm}]$ <br> (Front dimensions) | $80 \times 80$ |

Note: *1. Specify that the meter is to be used for the Auto.V when ordering the meter alone
*2. Set the full scale (A) to a value twice as large as the primary current setting (A) in the built-in OCR. For example, if the primary current of the OCR is 75A, read the full scale of the AC meter as 150A

## ■ Description

$7.2 / 3.6 \mathrm{kV}, 400 \mathrm{~A}, 600 \mathrm{~A}, 8 \mathrm{kA}, 12.5 \mathrm{kA}$ The new Multi-VCB series of generalpurpose vacuum circuit breakers are based on the conventional HA series and feature improved safety and ease of use. With 2300 mm high switchgear cubicles they can be stacked up to four high with consequent saving of installation space. Multi VCBs are available in different mounting version such as the fixed type ( $B, C, P$ ) and draw-out type (X, Y, U).

## - Features

- Highly reliable and safety closing system
- Manual-spring stored energy closing system for improved operation safety, reliability, and constant closing speed.
- Half the torque formerly required for the manual operation and a new-turntype handle improve operability.

- Motor-spring stored energy type also improved
- Instantaneous closing system The new closing system ensures instantaneous closing time of 30 ms . during switching to stand by circuit.
- AC/DC control circuit Common AC and DC control circuit eases application.
- More compact

Terminal blocks

- Terminal blocks are standard for the control circuits of motor-spring VCBs. Wire connect easily and quickly.

## - Auxiliary switches

- Slide-action auxiliary switch contacts improve contact reliability.
- Auxiliary switches can have up to 5 NO contacts, and up to 5 NC contacts may be added as options for external circuits.
- The width of the draw-out type is compatible with a panel width of 500 mm .
- The depth of the draw-out type is compatible with a panel depth of 700 mm .

KK03-062
Draw-out MW and PW type

Draw-out type for small depth switchboard.

Wiring diagram

- Draw-out extension rail (HZ2AE)

Used with draw-out type ( $\mathrm{X}, \mathrm{Y}, \mathrm{U}$ ). Use of an extension rail makes daily checking easier because the VCB can be pulled out of the panel.
Double stack types do not require lifters or chain blocks.

KK03-079

## - C-R type surge absorber

AF3320R3TXG0542
AF6620R3TXG0543
For further information see page 12/25.

- Testing jumper (HZ2AG)

Use to test remote ON/OFF operation of a VCB.

Surface mounting VCB-T1A, T2A

Flush mounting VCB-T1PA, T2PA

Name
r1: Charging resistor
r2: Discharge resistor
r3: Series resistor
C: Electrolytic capacitor SW: Discharge switch Z: Surge absorber

PL: Pilot lamp

- Position indicating switch (HZ2AD) Switch for indicating the service positions and test positions of draw-out (X, Y, U). Used for interlocking to other devices attached to the cradle for draw-out type.

## H.V. Distribution Equipment Vacuum magnetic contactors HN series

## Description

3.3/6.6kV 200, 400 Amps

HN-type vacuum magnetic contactors incorporate a SUPER MAGNET that has a built-in IC. The IC minimizes the power consumption used in the closing circuit. HN types vacuum magnetic contactors operate on both AC and DC power supplies. A common insulating frame for units with a rated voltage of 3 kV and 6 kV simplifies switchgear design.

## - Features

The SUPER MAGNET

- Holding currents are minimized with an IC-controlled closing circuit. This is a cost-effective feature.
- Both AC and DC power supply operation possible
- The SUPER MAGNET holds without chattering even when the line control voltage drops.
- The SUPER MAGNET's wide range of operating voltages allows it to be used in countries throughout the world.

## Operating coil voltage

| Rated voltage <br> AC $(50 / 60 \mathrm{~Hz})$ | DC | Operating <br> voltage range |
| :---: | :--- | :--- |
| - | $21-24 \mathrm{~V}$ | $85-110 \%$ |
| - | 48 V | of rated |
| $100-110 \mathrm{~V}$ | $100-110 \mathrm{~V}$ | voltage |
| $200-220 \mathrm{~V}$ | $200-220 \mathrm{~V}$ |  |

## Shared insulating frame for $3 \mathbf{k V}$ and

 6 kV contactorsHN type vacuum magnetic contactors have a special insulating frame. The dimensions of the frame are the same for both 3 kV and 6 kV models, which facilitates switchgear design.

## Advanced vacuum interrupter

A high performance interrupter minimizes surges due to closing and breaking, which makes special surge precautions unnecessary.

## H.V. Distribution Equipment Vacuum magnetic contactors HN series

## - Type number nomenclature

manically latched type

Operating coil voltage (Closing/Trip)
1: 100-110V AC, 100-110V DC
200-220V AC, 200-220V DC
3: 21-24V DC (Mechanically latched type only)
4: 48V DC
5: Closing 100-110V AC, $100-110 \mathrm{~V}$ DC
Trip $200-220 \mathrm{~V}$ AC, 200-220V DC
6: Closing 200-220V AC, 200-220V DC
Trip $100-110 \mathrm{~V}$ AC, $100-110 \mathrm{~V}$ DC
7: Other voltage
Specify operating voltage when ordering
S1: SPDT contacts for operating position and test position S2 : 2PDT contacts for operating position and test position Blank: No position switch

Bushing CT (BCT) (Optional accessories)*
For Y, H types
A to K (Specify BCT code when ordering, see page 12/61 (2))
VT (Optional accessories)*
For X, Y, H types
P1 to PA (Specify VT code when ordering, see page 12/61 (1))
Fuse holder type (For X, Y, H types)
A: For HF338E/3/20-100 or HF338E/6/20, 30 fuse
B: For HF338E/3/150, 200 or HF338E/6/40-200 fuse
C: For JB-3/50-200 or JB-6/20, 50 fuse
D: For JB-6/100-200 fuse
J: For JC-6/5-75 fuse
K: For JC-6/100 fuse

## ■ Supplied accessories for draw-out types - Mechanical interlock

1. When the contactor is closed, it is impossible to shift it from the service position to the test position.
2. Under the condition where the contactor is closed, it is impossible to change it from the test position to the service position.
3. At both the test and the service positions, the interlock pin will engage and so lock the contactor in position. Thus the positions are always fixed correctly. Even if a closing operation is carried out at an intermediate position, the contactor cannot be closed.

## - Electrical interlock

When the interlock pin is locked at both the service and test positions the limit switch will be closed, and the contactor can be operated.

Ratings of interlock contact

| Contact arrangement | SPDT |  |
| :--- | :--- | :--- |
| Operating current | Res. Load | Ind. Load |
| 250V AC | 16 A | 10 A |
| 125V AC | 16 A | 10 A |
| 125V DC | 0.6 A | 0.3 A |

## Ratings of fuse blown indicator

| Contact arrangement | $1 \mathrm{NO}+1 \mathrm{NC}$ |  |
| :--- | :--- | :--- |
| Operating current | Res. Load | Ind. Load |
| 250V AC | 16 A | 10 A |
| 250V DC | 0.3 A | 0.06 A |
| 125V DC | 0.6 A | 0.3 A |
| 30V DC | 6 A | 4 A |

## - Shutter

Cradle with bushing type connectors can also be provided with a shutter.

## - On-off counter (6-digit)

An on-off counter is standard with all VCB series. This easily legible counter enables quick estimation of remaining service life.

# H.V. Distribution Equipment Vacuum magnetic contactors <br> HN series 

## ■ Optional accessories

## Position switches

Type:Position switch N1 (Ordering code:HZ1AD)
SPDT position switches can be fitted to indicate the test position and the service position. (For X, Y, H)

## Ratings of position switch

| Contact arrangement | Service pos. SPDT, Test pos. SPDT |  |
| :--- | :---: | :--- |
|  | Service pos. 2PDT, Test pos. 2PDT |  |
| Operating current | Res. Load | Ind. Load |
| 250V AC/DC | 10 A | NC: 2A, NO: 1.5A |
| 125V AC/DC | NC: 7.5 A, NO: 6A |  |
| 30V DC | 15 A | 10A |
| 14V DC | NC: 15A, NO: 10A |  |

## - VT and bushing CT (BCT)

Draw-out types have room for fitting VTs in the space box.
It is possible to fit up to 2 VTs in the space. 3 BCTs can be fitted to the bushing type connector. The ratings are shown in the Table.

## Ratings of VT

| For VT | For control power supply * |
| :--- | :--- |
| $3300 \mathrm{~V} / 110 \mathrm{~V}, 220 \mathrm{~V} 1.0$ class 100 VA | $3300 \mathrm{~V} / 110 \mathrm{~V}, 220 \mathrm{~V} 400 \mathrm{VA}$ |
| $6600 \mathrm{~V} / 110 \mathrm{~V}, 220 \mathrm{~V} 1.0$ class 100 VA | $6600 \mathrm{~V} / 110 \mathrm{~V}, 220 \mathrm{~V} 400 \mathrm{VA}$ |

* When used as control power supply, it becomes short-time rating.

## Ratings of BCT

| Max. <br> voltage (kV) | Frequency <br> $(\mathrm{Hz})$ | Primary <br> current(A) | Secondary <br> current(A) | Burden <br> (VA) | Overcurrent <br> capacity |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 6.9 | $50 / 60$ | $20,30,40,50$ <br> $75,100,150$ <br> $200,300,400$ | 5 | 25 | 40 times, |
|  |  |  |  | 1 sec |  |

## - Capacitor trip devices

| Type | Ordering <br> code | Tripping time after <br> power failure: | Input voltage | Tripping coil <br> voltage |
| :--- | :--- | :--- | :--- | :--- |
| VS-T1A | HZ1NI | 30 sec. | $100-110$ V AC | $100-110 \mathrm{~V}$ DC |
| VS-T2A | HZ1NJ |  | $200-220$ V AC | $200-220 \mathrm{~V}$ DC |

## - C-R type surge absorber

| Type | Ordering <br> code | Max. operating <br> voltage | Frequency | Rated <br> voltage |  |
| :--- | :--- | :--- | :--- | :--- | :---: |
| AF3320R3 | HZ1AK | $115 \%$ <br> rated voltage | $50 / 60 \mathrm{~Hz}$ | $\frac{3.3 \mathrm{kV}}{\sqrt{3}}$ |  |
| TXG0542 |  |  | $50 / 60 \mathrm{~Hz}$ | $\frac{6.6 \mathrm{kV}}{\sqrt{3}}$ |  |
| AF6620R3 <br> TXG0543 | HZ1AL |  |  |  |  |

## Dimensions,mm/Surge absorber

## Codes of VTs and BCTs for draw-out types

| (1) VT (For X, Y, H) |  |  | (2) BCT (For Y, H) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Code | Voltage | No. of VTs | Code | Current | No. of BCTs | Code | Current | No. of BCTs |
| P1 | $3.3 \mathrm{kV} / 110 \mathrm{~V}$ | 1 | A2 | 20/5A | 2 | F2 | 100/5A | 2 |
| P2 | $3.3 \mathrm{kV} / 110 \mathrm{~V}$ | 2 | A3 | 20/5A | 3 | F3 | 100/5A | 3 |
| P3 | $6.6 \mathrm{kV} / 110 \mathrm{~V}$ | 1 | B2 | 30/5A | 2 | G2 | 150/5A | 2 |
| P4 | $6.6 \mathrm{kV} / 110 \mathrm{~V}$ | 2 | B3 | 30/5A | 3 | G3 | 150/5A | 3 |
| P5 | $3.3 \mathrm{kV} / 220 \mathrm{~V}$ | 1 | C2 | 40/5A | 2 | H2 | 200/5A | 2 |
| P6 | $3.3 \mathrm{kV} / 220 \mathrm{~V}$ | 2 | C3 | 40/5A | 3 | H3 | 200/5A | 3 |
| P7 | $6.6 \mathrm{kV} / 220 \mathrm{~V}$ | 1 | D2 | 50/5A | 2 | J2 | 300/5A | 2 |
| P8 | $6.6 \mathrm{kV} / 220 \mathrm{~V}$ | 2 | D3 | 50/5A | 3 | J3 | 300/5A | 3 |
| P9 | $3.3 \mathrm{kV} / 110 \mathrm{~V}$ | 1 | E2 | 75/5A | 2 | K2 | 400/5A | 2 |
|  | $3.3 \mathrm{kV} / 220 \mathrm{~V}$ | 1 | E3 | 75/5A | 3 | K3 <br> Blank | $400 / 5 \mathrm{~A}$ <br> Without BCT | 3 |
| PA | $6.6 \mathrm{kV} / 110 \mathrm{~V}$ | 1 |  |  |  |  |  |  |
|  | $6.6 \mathrm{kV} / 220 \mathrm{~V}$ | 1 |  |  |  |  |  |  |
| Blank | Without VT |  |  |  |  |  |  |  |

- Mounting position of CT 2 CTs-Fit to U and W poles 3 CTs- Fit to U, V and W poles
(A) (S) (T)
(ㄴ) (ㄴ) (ㄴ)

Example: • Two 6.6kV/110V VTs and no BCT
HN46A $-\square \square \square \square / P 4$

- No VT and two 50/5A BCTs

HN46A $\square-\square \square \square / D 2$

- Two 6.6kV/110V VTs and two 50/5A BCTs HN46A $\square-\square \square \square$ P4D2

## H.V. Distribution Equipment <br> Vacuum magnetic contactors HN series

## Optional accessories

## - Power fuses for draw-out types

The table indicates the appropriate current limiting fuses for use with HN vacuum magnetic contactors.

| System voltage (kV) | Type <br> Refer to the Table below | Ratings Voltage (kV) | Breaking capacity (kA) | Minimum breaking current(A) | Current <br> (A) | Applicable loa $3 \phi$ Motor Squirrel-cage type(kW) | (max) <br> Wound-rotor type(kW) | $3 \phi$ Transformer (kVA) | $3 \phi$ Capacitor <br> (kVA) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Protective Relays <br> QH series <br> General information

## QH series protective relays

## Description

FUJI overcurrent relays and voltage relays have inverse-time characteristics (induction and static types). The QH series is compact budget priced version and is easily installed on panels. It is drum-shaped and ideally suited for general industrial applications.
The directional ground-fault relay (DG) is used, combined with zero-phase current transformer (ZCT) and zero-phase potential input device (ZPD).
The ground-fault relay (GR) is used, combined with zero-phase current transformer (ZCT).

## ■ Specifications

- Overcurrent relays

| Type |  | QH-OC1 | QH-OC2 |
| :---: | :---: | :---: | :---: |
| Trip system |  | Shunt trip | Current trip |
| Rated current |  | 5A |  |
| Rated frequency |  | $50 / 60 \mathrm{~Hz}$ |  |
| Inverse time-lag element | Setting range | 3-3.5-4-4.5-5-6A |  |
|  | Time-lag setting | 0.5-1-2-3-4-5-6-7-8-9-10-15-20-30-40-50 (16 steps) |  |
|  | Operate time | $300 \%$ overcurrent: $10 \mathrm{~s} \pm 17 \%$ or less, $700 \%$ overcurrent: $1.67 \mathrm{~s} \pm 12 \%$ or less at min. operating current and time-lag setting $=10$ |  |
|  | Operate characteristic | Extremely inverse time-lag |  |
| Instantaneous element | Setting range | 20-30-40-50-60-Lock |  |
|  | Operate time | 200\%, 0.05s or less |  |
| Indication LED |  | Start, time-lag elapsed, operate, power, alarm |  |
| Contact | For trip $\begin{aligned} & \text { QH-OC1: } 1 \mathrm{NO} \\ & \text { QH-OC2: } 2 \mathrm{NC} \end{aligned}$ | ```Making capacity 10 A at 100 V DC, 220V DC (L/R=7ms) Breaking capacity 1 A at 110 V DC ( \(\mathrm{L} / \mathrm{R}=7 \mathrm{~ms}\) ) 3.5 A at 220 V AC \((\cos \varnothing=0.4)\)``` | Breaking capacity 60 A at 110 V AC (depending on CT burden) |
|  | For alarm, 1NO | 2 A at 24 V DC (max. 30W at 125 V DC) (L/R=7ms) 2 A at 100 V AC (max. 220 VA at 250 V AC ) $(\cos \varnothing=0.4)$ |  |
| Consumed VA |  | 2VA (at 5A) | 2VA (at 5A) |
| Mass |  | 1.1 kg | 1.1 kg |

- Voltage relays

| Type |  | Overvoltage relay | Undervoltage relay |
| :---: | :---: | :---: | :---: |
|  |  | QH-OV1 | QH-UV1 |
| Trip system |  | Shunt trip |  |
| Rate voltage |  | 110V AC | 110V AC |
| Setting range |  | 115-120-125-130-135-140-150V | 60-65-70-75-80-85-90-95-100V |
| Operate time setting |  | 0.1-0.2-0.5-1-1.5-2-2.5-3-4-5-6-8-10s | 0.1-0.2-0.5-1-1.5-2-2.5-3-4-5-6-8-10s |
| Indication |  | Start, operate, power |  |
| Contact | For trip: 1NO | Making capacity 5 A at 250 V AC $(\cos \varnothing=0.4)$ Breaking capacity 2 A at 250 V AC $(\cos \varnothing=0.4)$ |  |
|  | For alarm: 1NO |  |  |
| Consumed VA |  | 2VA | 4VA |
| Mass |  | 1 kg | 1.1 kg |

- Directional ground-fault relays

- Accessories, sold separately

## Zero-phase current transformers

| Description | Primary current <br> (A) | Rated primary voltage (kV) | Dielectric strength | Overcurrent constant | Type | Mass <br> (kg) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Round-hole through-type | $\begin{aligned} & 100 \\ & 200 \\ & 300 \\ & 400 \\ & 600 \end{aligned}$ | 3.3/6.6 <br> 50/60Hz <br> common use | $22 \mathrm{kV} \mathrm{AC}$$1 \mathrm{~min} .$ | 40 | $\begin{aligned} & \hline \text { ZCT-561A } \\ & \text { ZCT-562A } \\ & \text { ZCT-653 } \\ & \text { ZCT-654 } \\ & \text { ZCT-906 } \end{aligned}$ | $\begin{array}{\|l\|} \hline 0.5 \\ 0.5 \\ 0.8 \\ 0.8 \\ 3.0 \end{array}$ |
| Split-toroidal type | $\begin{aligned} & 100 \\ & 400 \end{aligned}$ |  |  |  | $\begin{aligned} & \text { ZCT-451D } \\ & \text { ZCT-654D } \end{aligned}$ | $\begin{aligned} & 0.9 \\ & 1.2 \end{aligned}$ |

Zero-phase potential input device

| Type | ZPD-1 |
| :--- | :--- |
| Structure | Indoor use, epoxi-resin <br> insulator |
| Rated voltage | 7.2 kV |
| Electrostatic <br> capacitance | $3 \times 250 \mathrm{pF}$ |
| Dielectric <br> strength | Class 6A, 22kV AC <br> $(1$ minute $)$ |
| Mass (kg) | 3.6 kg (1set = 3pcs) |

- Ground-fault relays

| Type |  | QH-GR3A |
| :---: | :---: | :---: |
| Trip system |  | Shunt trip, current trip |
| Operating current setting |  | 0.1-0.2-0.4-0.6-0.8A |
| Operating time |  | 0.1 to 0.3 s at $130 \%$ current setting value 0.1 to 0.2 s at $400 \%$ current setting value |
| Indication | Operation | Magnetic inversion (manual reset) |
|  | Power | Green LED |
| Contact | For trips: 2PDT | ```Making capacity: 10 A at 250 V AC \((\cos \varnothing=0.4), 10 \mathrm{~A}\) at 125 V DC ( \(\mathrm{L} / \mathrm{R}=7 \mathrm{~ms}\) ) Breaking capacity: 7.5 A at 110 V AC (max. 825 VA at 250 V AC) \((\cos \varnothing=0.4)\) 1.2 A at 100 V DC (max. 120W at 125 V DC) ( \(\mathrm{L} / \mathrm{R}=7 \mathrm{~ms}\) )``` |
|  | For alarm: 1NO | 2 A at 110 V AC (max. 220 VA at 250 V AC ) 2 A at 24 V DC ( 0.1 A at 125 V DC) |
| Consumed VA |  | 5VA (at operating) |
| Test button |  | Providied |
| Mass |  | 1.7 kg |

## Catalog Disclaimer

The information contained in this catalog does not constitute an express or implied warranty of quality, any warranty of merchantability of fitness for a particular purpose is hereby disclaimed.

Since the user's product information, specific use application, and conditions of use are all outside of Fuji Electric FA Components \& Systems'control, it shall be the responsibility of the user to determine the suitability of any of the products mentioned for the user's application.

## One Year Limited Warranty

The products identified in this catalog shall be sold pursuant to the terms and conditions identified in the "Conditions of Sale" issued by Fuji Electric FA with each order confirmation.

Except to the extent otherwise provided for in the Conditions of Sale issued by Fuji Electric FA, Fuji Electric FA warrants that the Fuji Electric FA products identified in this catalog shall be free from significant defects in materials and workmanship provided the product has not been: 1) repaired or altered by others than Fuji Electric FA; 2) subjected to negligence, accident, misuse, or damage by circumstances beyond Fuji Electric FA's control; 3) improperly operated, maintained or stored; or 4) used in other than normal use or service. This warranty shall apply only to defects appearing within one (1) year from the date of shipment by Fuji Electric FA, and in such case, only if such defects are reported to Fuji Electric FA within thirty (30) days of discovery by purchaser. Such notice should be submitted in writing to Fuji Electric FA at 5-7, Nihonbashi Odemma-cho, Chuo-ku, Tokyo, Japan. The sole and exclusive remedy with respected to the above warranty whether such claim is based on warranty, contract, negligence, strict liability or any other theory, is limited to the repair or replacement of such product or, at Fuji Electric FA's option reimbursement by Fuji Electric FA of the purchase price paid to Fuji Electric FA for the particular product. Fuji Electric FA does not make any other representations or warranties, whether oral or in writing, expressed or implied, including but not limited to any warranty regarding merchantability or fitness for a particular purpose. Except as provided in the Conditions of Sale, no agent or representative of Fuji Electric FA is authorized to modify the terms of this warranty in writing or orally.

In no event shall Fuji Electric FA be liable for special, indirect or consequential damages, including but not limited to, loss of use of the product, other equipment, plant and power system which is installed with the product, loss of profits or revenues, cost of capital, or claims against the purchaser or user of the product by its customers resulting from the use of information, recommendations and descriptions contained herein. The purchaser agrees to pass on to its customers and users, in writing at the time inquiries and orders are received by buyer, Fuji Electric FA's warranty as set forth above.

## . Caution "Safety precautions"

- Operate (keep) in the environment specified in the operating instructions and manual. High temperature, high humidity, condensation, dust, corrosive gases, oil, organic solvents, excessive vibration or shock might cause electric shock, fire, erratic operation or failure.
- Follow the regulations of industrial wastes when the product is to be discarded.
- The products covered in this catalogs have not been designed or manufactured for use in equipment or systems which, in the event of failure, can lead to loss of human life.
- If you intend to use the products covered in this catalog for special applications, such as for nuclear energy control, aerospace, medical, or transportation, please consult our Fuji Electric FA agent.
- Be sure to provide protective measures when using the product covered in these catalogs in equipment which, in the event of failure, may lead to loss of human life or other grave results.
- Follow the directions of the operating instructions when mounting the product.
